**THERMAL PROJECT MONITORING DIVISION  
CENTRAL ELECTRICITY AUTHORITY  
NEW DELHI**

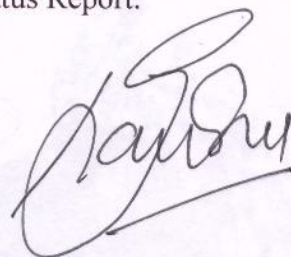

## **FOREWORD**

As per clause 73(f) of Electricity Act 2003, Central Electricity Authority is to “promote and assist in the timely completion of schemes and projects”. The Thermal Project Monitoring (TPM) Divisions of CEA are entrusted with the responsibility of monitoring the progress of construction/erection activities of all the thermal power projects in the country till the units are commissioned. Visits are also made by CEA officers to the sites for assessing the on-spot progress of works and rendering the advice/assistance in solving the problems being faced by the project authorities, thereby helping the project authorities in avoiding/minimizing the time and cost overruns of the thermal power projects.

In this context, Thermal Project Monitoring Divisions, Central Electricity Authority have been bringing out monthly report entitled “Broad Status of Thermal Power Projects in the Country”. This report covers up-to-date information in respect of 12<sup>th</sup> plan thermal power projects under execution in the country. The report gives the details of the milestones achieved as on date, along with the name, capacity, location, implementing agency, commissioning schedule, type of fuel, construction agency, estimated cost besides highlighting critical issues requiring immediate attention of concerned authorities in the implementation of thermal power projects in the country.

The Broad Status Report is being brought out regularly by TPM divisions on the basis of data forwarded by various project authorities, visits made by CEA Engineers to various power projects, holding discussions with the executing agencies and suppliers of equipments from time to time.

We welcome feedback for further improvement in the Broad Status Report.

**Place: New Delhi**

**Dated: 24<sup>th</sup> January, 2017**

**(Phool Chandra)  
Chief Engineer (TPM-II)**

Structural works 70% done, balance 30%. Equipment erection 30% done, balance 70%. Crusher structural work under progress and 4 crushers placed and alignment etc. to be done.<br>Out of 4 wagon tipplers, one WT (WT4) erected. WT3- foundation is ready. WT1&2- excavation in progress.<br><br><b>AHP:</b> BAH erected. Gates and clinker grinders etc. to be erected. Ash slurry pump house, Ash water pump house, transport air compressor, vacuum pumps, switchgears buildings are ready but equipment viz. ash water pumps, ash slurry pumps vacuum pumps etc are yet to be installed. For fly ash disposal, 6 nos. HCSD pumps placed in position but yet to be commissioned with pending work as alignment, piping, electrical, C&I etc. AHP package terminated in Jul’15 and balance works re-awarded to M/s Indure in Jul’16.<br><br><b>PT Plant:</b> Order placed on Ion Exchange in Apr’12.<br><br><b>DM Plant:</b> Order placed on Ion Exchange in Mar’12.<br><br><b>CW Pumps:</b> Out of total 5 CW pumps, 3 are fully ready with motor trial run done. Pump trial run to be done after availability of water. Erection of remaining 2 CWP’s under progress.<br><br><b>IDCTs:</b> Each unit is provided with 2 IDCTs. Unit#1: IDCT 1B fully ready. IDCT 1A under completion with fills erected in 6/14 (4 cells per month); fans, motor, gear box erected in 8/14. Unit#2: Civil works under progress in both the IDCTs. |

Boiler Hydro test done in Dec'15.BLU expected in Jan'17.<br><b>ESP:</b> 05 out of 06 passes of ESP erection completed.<br><b>TG:</b> Condenser erection started on 29.05.2015 and TG erection started in Aug'15.TG box-up expected in Jan'17. 02 nos of MDBFP's available at site. TDBFP's are not available at site.<br><b>Unit-2:</b><br><b>Boiler:</b> Boiler erection started in Apr'14. Boiler Hydro test done in Apr'16.BLU expected in Apr'17<br><b>ESP:</b> ESP structural erection completed. ESP hoppers erection completed in 3rd pass and hopper erection works are in progress in 4th pass.<br><b>TG:</b> Condenser erection started in Jan'16. TG deck casting started on 26.05.16. TG erection start expected in Jan'17.<br><b>Balance of Plant:</b><br><b>Chimney:</b> Chimney shell casting is completed. Flue cans erection completed.<br><br><b>CHP:</b> There are two nos. of wagon tipplers and one no. of track hopper planned in this project. 01 no. of wagon tippler (WT) is erected. WT-2 erection works are in progress. Stacker-Reclaimer-1&2 (SR-1&2) erection works in progress. All transfer points erection in progress. Erection works of various galleries started. Most of the crusher house structural erection works completed. Track Hopper civil works are in progress. 50% works of hopper and floor casting of track hopper and maintenance platforms on both sides completed.<br><br><b>AHP:</b> Unit-1 Bottom Ash hopper erection works to be completed. Unit-1 fly ash evacuation works to be completed.<br>Unit-2 Bottom ash hopper (BAH-2) foundations to be completed. Ash slurry sump is ready. Ash slurry pumps foundations completed. Ash water storage tank is ready. Ash water pump house building works in progress.<br><br>Silos: HCSD silos (03 nos.) foundation works are in progress. HCSD pump house works in progress.<br><br>Ash dyke: Order placed on M/s K N International in Dec'13. Ash dyke is located around 06 km from the plant. Ash slurry lines works from ash slurry pump house to ash dyke to be completed. Presently ash slurry lines pedestals work started. Excavation and bund raising works are in progress.<br><br><b>PT Plant:</b> All clarifiers are ready. 03 nos. of CW clarifiers are interconnected. Filter house building is ready. Filter bed works are in progress.<br><br><b>DM plant:</b> This package is awarded to M/s Driplex. There are 03 nos. of streams in this plant. Vessels alignment is in progress. 02 nos. of DM water storage tanks are ready.<br><br><b>CWPs:</b> CW pump house is of open type in this project. Floor casting completed. 05 nos. of CW pumps foundations completed. Forebay works completed. CW pumps are to be placed on the foundations. CW discharge side piping erection completed.<br><br><b>IDCT:</b> For each unit there are 02 blocks of IDCTs. Each IDCT is having 09 nos. of cells.<br>CT-1A: All 09 cells fan deck casting completed.<br>CT-1B: 07 out of 09 cells fan deck casting completed. |  |

|                   | Power Evacuation system                                                          |                                                                                                                                                          | : For power evacuation and drawing of start-up power,400kVand 220kV switchyard would be provided. Each of the 500 MW units would be connected to the 400kV switchyard. The power generated at the plant would be evacuated through a 400kV system. Start-up power would be drawn from the 220kV switchyard.<br>The generator transformers of 500MW units would step up generator voltages to the switchyard voltage of 400Kv.One and Half Breaker scheme is proposed for 400kV and 220kV switchyard. These schemes are reliable and provide flexibility in operation. |                        |       |                        |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |  |

Both the gas turbines (6FA, GE France) & generator placed on foundations. Operation container module for local operator in open cycle placed in position. Bypass diverter and damper erection completed. Generator transformer, Unit Aux. transformer and Station transformer commissioned. Gas conditioning skids (Both) GAIL & SEPL have been commissioned. Cranking of GTs completed. Both the GTs are on turning gear. All BOPs are commissioned. Start up power available and switchyard back charged. Power evacuation line (220 kV) is ready. PPA already signed with Uttarakhand Govt. Open cycle synchronization is expected in 07/16.<br><br><b>COMBINED CYCLE</b><br><b>HRSG-I&amp;II:</b><br>HRSG erection completed in 09/11. ACC commissioning is achieved in 09/11. HT for both the HRSG completed. Due to long preservation HT in the presence of Boiler Inspector is expected in 07/16. Both the HRSG are ready for ABO.<br><b>ST:</b><br>ST&STG supply received in 05/11. ST erection started in 05/11 and completed. Oil flushing completed. STG is on barring gear. Combined Cycle commissioning is expected in 08/16.<br><br><b>BoPs:</b><br><b>All the BoPs are ready.</b><br><b>Permission to operate targeted by Feb 2017.</b> |

LILO of 220kV circuit from 400kV Kashipur to 220 kV Mahua Khera Ganj is nearing completion. Long Term Access (LTA) from 220kV/132kV Mahua Khera Ganj sub-station has been approved by PGCIL. |                        |       |                        |       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |  |

| Reasons for Delay               |                                           | Initial delay due to Change of award of Chimney. Delay in execution of BOP package. As the firm could not proceed due to status quo ordered by Hon’ble High Court of C.G on 26.08.09. Effective date has to be shifted from 25.08.09 to 10.12.09.Light-up was delayed due to readiness of Chimney. Schedule was 09/2011 , Now completed on 30.09.12 with temporary chimney. ABB stopped supply of cables and not doing erection work The work was allotted to M/s ABB by M/s Indu sub-vendor of M/s Techpro (Fund flow problem). Supply & laying of HT & LT cable are continue. |               |                        |       |                        |                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
