

## Annex I

### **Brief note on Perspective transmission Plan for 20 Year (2014-2034)**

**Overview :** The perspective transmission plan is basically indicative in nature and covers the transmission systems at 400kV and above voltage levels. The 'Perspective transmission Plan for 20 Year (2014-2034)' has been formulated in two parts, Part- I : Evolving Transmission System Additions for 13<sup>th</sup> Plan i.e. up to 2021-22 and Part- II: Evolving Transmission Corridors for period 2022-34 i.e. 14<sup>th</sup>, 15<sup>th</sup> Plans and beyond up to 2034.

In respect of part one, i.e. up to 13<sup>th</sup> Plan end, transmission system has been evolved based on State-wise demand projections and generation plants under various stages of implementation. In regard to part two, as the generation has been de-licensed and generation plants in this timeframe are yet to take off, it is not possible to identify the optimum generation plan for the period 2022-34. In such a scenario, broad transmission corridors have been identified.

**Load Growth :** The electricity demand projections of each state/region has been considered as per 18<sup>th</sup> EPS (Electric Power Survey) of the country upto 15<sup>th</sup> Plan i.e. up to 2031-32. A forecast for 2034, by extrapolating the EPS figures has been made as the 18<sup>th</sup> EPS does not provide forecast for the year 2033-34. The total demand of the country including export to SAARC countries is expected to grow from 148 GW at present to 615 GW by 2033-34 as shown below. State-wise details is enclosed at **Annexure-1**.

#### **Region-wise Demand Forecast (in MW)**

**Generation Growth :** The present generation installed capacity in the country by end of July 2014 was about 250 GW including renewable generating resources of about 32 GW. For the purpose of this report, an assessment has been carried out to identify generation capacity

state-wise and type-wise that is likely to be commissioned up to end of 13<sup>th</sup> Plan i.e. 2021-22. Accordingly, the total Installed Capacity by the end of 13<sup>th</sup> Plan is expected to be of the order of 469 GW which also includes 65 GW of renewable capacity.

The projection of generation beyond 2021-22 has been made utilising the result of the Report of the “Working Group on Integrated Strategy for Bulk Transport of Energy”, [part of the Report of National Transport Development Policy Committee (NTDPC) setup by Cabinet Secretariat] supplemented with additional information as available with regard to nuclear, hydro projects in SAARC, gas resources. Two generation addition scenarios have been identified for 14th and 15th Plan Periods, Scenario-I as per NTDPC report and Scenario-II considering low availability of Gas and additional imported coal. A generation capacity scenario for 2033-34 has been considered by scaling up the coal based and gas based capacities of scenario-I. The installed capacity including SAARC import grows from 250 GW at present upto 1029 GW by 2033-34 as shown below. The state-wise details is given at **Annexure-2**.

#### Region-wise Installed Capacity (in MW)

State/UTs	11th Plan End (2011-12)	Existing as on 31-07-14	12 <sup>th</sup> Plan End (2016-17)	13 <sup>th</sup> Plan End (2021-22)	14 <sup>th</sup> Plan End (2026-27)		15 <sup>th</sup> Plan End (2031-32)		Estimates for 2033-34

**Import/Export Requirement :** The transmission system is evolved to cater to the inter-state and inter-regional power transfer requirements. In order to find out the requirement of transmission system, the import / export requirement has been worked out on the basis of total power available within a Region/State considering the generation projects physically located in the Region/State irrespective of its classification as well as the projected demand. The base Load Generation scenario has been evolved for 3 seasons viz. winter, summer and monsoon and peak and off-peak conditions for each of the seasons. The import/export of different regions as well as the SAARC countries is shown below :

### Maximum Import/ Export of different Regions / SAARC Countries

Region	13 <sup>th</sup> Plan (2021-22)	14 <sup>th</sup> Plan (Scenario-I / Scenario-II)	15 <sup>th</sup> Plan (Scenario-I / Scenario-II)	2033-34
NR (Import)	22000	23000/22000	34000/31000	44000

**Evolving Transmission System upto 13<sup>th</sup> plan :** Transmission system upto 13<sup>th</sup> plan has been evolved based on requirement of power transfer emerged from the load flow studies. Beyond 13<sup>th</sup> plan, broad requirement of interregional transmission capacity has been estimated.

A summary of the growth of 400kV and above transmission system from 11<sup>th</sup> to 13<sup>th</sup> Plans period is indicated below:

<b>Transmission Lines (400kV and above system) (values in ckm)</b>				
	<b>11th Plan End</b>	<b>Existing as on 31-07-14</b>	<b>12<sup>th</sup> Plan End</b>	<b>13<sup>th</sup> Plan End</b>
<b>HVDC Bipole lines</b>	9432	9432	16872	27472
<b>765 kV</b>	5250	13357	32250	54450
<b>400 kV</b>	106819	129110	144819	174819
<b>Total</b>	<b>121501</b>	<b>151899</b>	<b>193941</b>	<b>256741</b>

<b>Substations (AC &amp; HVDC) (400kV and above) (values in MVA / MW)</b>				
	<b>11th Plan End</b>	<b>Existing as on 31-07-14</b>	<b>12<sup>th</sup> Plan End</b>	<b>13<sup>th</sup> Plan End</b>
<b><u>HVDC Terminals:</u></b>				
HVDC back-to-back	3000	3000	3000	3000
HVDC Bipole terminals	6750	13500	19500	34500
<b>Total- HVDC Terminal Capacity, MW</b>	<b>9750</b>	<b>16500</b>	<b>22500</b>	<b>37500</b>
<b><u>AC Substations</u></b>				
765 kV	25000	96000	174000	253000
400 kV	151027	182632	196027	245027
<b>Total- AC Substation capacity, MVA</b>	<b>176027</b>	<b>278632</b>	<b>370027</b>	<b>498027</b>

**Fund requirement :** It is estimated that during 13th Plan Period, about 62800 circuit kilometers (ckm) of transmission lines, 15000 MW of HVDC terminal capacity and 128000 MVA of transformation capacity of the 400 kV and above voltage level transmission systems would be required. Accordingly, it is estimated that total fund requirement for 13th Plan would be of the order of Rs. 2,60,000 crore as against Rs. 2,34,000 crore required in 12th plan period. This would comprise of Rs. 1,60,000 crore for 400kV and above transmission system and about 1,00,000 crores for 220 kV and below systems most of which would be as state transmission systems.

**Way Forward :** The transmission system identified for the 13<sup>th</sup> Plan would be firmed up through further detailed studies like transient stability, low frequency oscillations, reactive power compensation, short circuit and measures to limit fault levels etc. While implementing the Transmission Plan important factors like Issues related to ROW and forest clearance; mechanisms for secured operation of large Indian grid; developing adequate balancing facilities and mechanisms for handling variable nature of renewable Energy sources of generation etc need to be addressed. The details of various corridors would be worked out depending on the status of various future generation, load growth as well as transmission projects. The **intra-state transmission system** is to be developed by the State Transmission Utilities. For a coordinated development process aiming at perspective optimization in meeting the growth targets, it would be appropriate that the State Transmission Utilities prepare their State Electricity Plans taking advantage of development plans for regional grid system and focusing on the specific requirements of the concerned State.
