

**ALL India Electrical Accidents State Wise**  
**Statistics 2024-2025- Format 19**

**&**

**ALL India Electrical Accidents Reasons-**  
**Format 20**

## Preface

Electricity plays a vital role in our daily lives, but it also brings risks when safety is not ensured. Every year, many accidents related to electricity are reported from different parts of India. These accidents cause harm to people, animals, and property. To properly record and study such incidents, the Central Electricity Authority (CEA) has created standard reporting formats under the CEA Regulations, 2007.

In particular, Format 19 records the number of electrical accidents in different areas such as power stations, transmission lines, distribution networks, and consumer premises. Format 20 explains the reasons behind these accidents, such as conductor snapping, contact with live wires, poor maintenance, or lack of safety practices.

This report brings together the electrical accident data collected from all States and Union Territories (UTs) of India. By compiling and presenting this information in one place, the report aims to help, electricity utilities understand the problem better and take effective steps to prevent such accidents in the future.

## Introduction

India's power sector has grown rapidly, covering almost every corner of the country with electricity supply. Along with this progress, however, comes the responsibility of ensuring safety in generation, transmission, distribution, and use of electricity. Unfortunately, electrical accidents continue to occur across States and Union Territories, leading to loss of human and animal lives, and sometimes damaging property and supply systems.

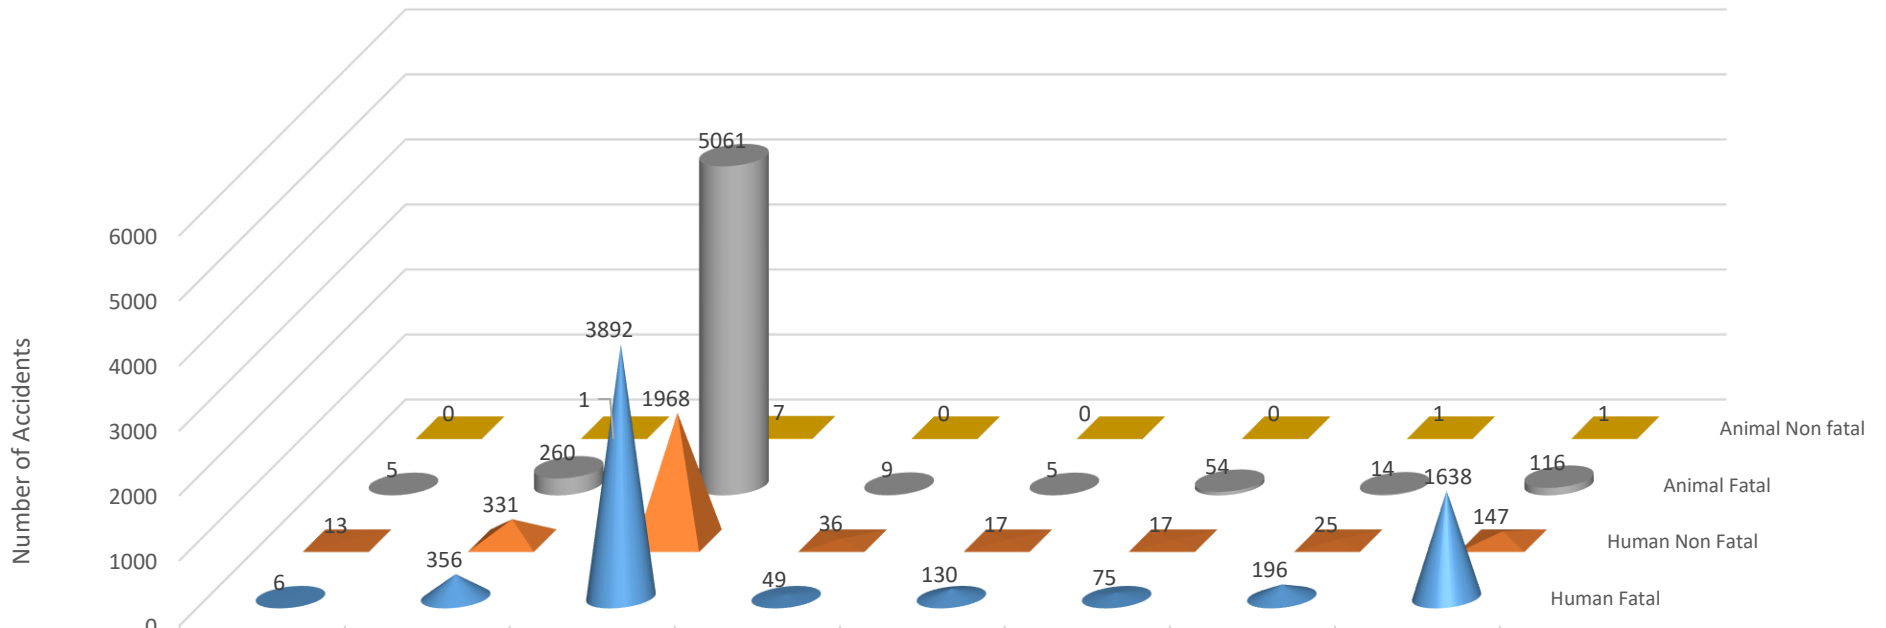

To track and study these incidents, the Central Electricity Authority (CEA) requires all electricity utilities and related organizations to submit data in a common format.

Format 19 provides statistics on the number of electrical accidents, dividing them into human and animal cases, both fatal and non-fatal.

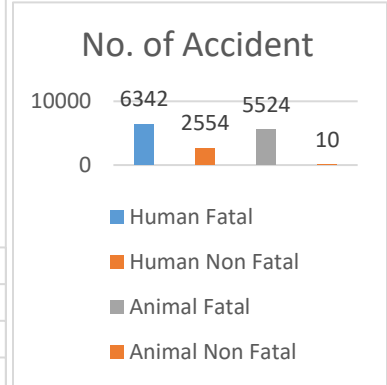

Format 20 highlights the main reasons behind these accidents, such as snapping of conductors, accidental contact with live equipment, use of faulty appliances, poor maintenance, or unauthorized electrical work.

This report compiles the data submitted by all States and Union Territories of India under these formats. It gives a combined picture of accident trends and causes at the national level. The aim is to create awareness, identify problem areas, and suggest directions for improving safety measures in the electricity sector, so that accidents can be reduced in the coming years.
