3	DISCOMs/Utilities-wise Electricity Consumption Details-EV charging stations in India	5
4	Graphical representation of consumption by EV-charging stations	8

## **FOREWORD**

India's insufficient petroleum reserves have led to heavy reliance on crude oil and natural gas imports, making it the third-largest oil importer globally, following the US and China. Approximately 82.8% of India's crude oil and 45.3% of its natural gas are imported. The consumption of petroleum products significantly contributes to air pollution, creating a pressing need to curb their usage and tackle the pollution issue. Moreover, the substantial size of crude oil imports burdens the Indian economy, necessitating a shift toward cleaner fuel alternatives and technologies to reduce dependence on petroleum products and safeguard the environment.

The Ministry of Power, with aim to accelerate the E-mobility transition in the country by accelerating development of Public Charging Infrastructure (PCS) for electric vehicles, has published revised consolidated guidelines titled "Guidelines for Installation and Operation of Electric Vehicle Charging Infrastructure-2024" dated 17.09.2024.

Further, after reviewing FAME-II and EMPS-2024, Ministry of Heavy Industries (MHI) formulated PM Electric Drive Revolution in Innovative Vehicle Enhancement (PM E-DRIVE) scheme with the approval of the Union Cabinet. The number of vehicles and the expenditure under EMPS-2024 (implemented for the period from 1st April 2024 to 30th September 2024) is subsumed under the number of vehicles and outlay of PM E-DRIVE Scheme. The PM E-DRIVE Scheme, with an outlay of ₹10,900 crore, shall be implemented from 1st October 2024 to 31st March 2026, for faster adoption of electric vehicles (EVs), setting up of charging infrastructure and development of EV manufacturing eco-system in the country.

In this regard, information on PCS is required for assessment of progress made in development of necessary charging infrastructure in meeting the various stated objectives like development of safe & reliable EV charging eco system, ensuring energy security & reduction of emission intensity etc., and to take further policy intervention. The data on energy consumption in these EV charging stations is also important for the purpose of load forecasting, distribution system planning and integrated resource planning in the country.

This report is based on the data/information submitted by various utilities. Information from other utilities is awaited to make this report more comprehensive.

**Note: As per the data furnished by State DISCOMs/ Utilities. The electricity consumption in MU is rounded off to nearest hundredth place.**

## Graphical representation of consumption by EV – Public Charging Stations (PCS)

### Total EV-PCS Electricity Consumption in 2025-26 (Till Dec 2025) (in MU)

It can be seen from above graph that in 2025-26 till December month, Delhi has the maximum PCS electric-vehicles electricity consumption (321.99 MU, 29.2%) followed by Maharashtra (268.90 MU, 24.4%), Karnataka (156.76 MU, 14.2%), and Telangana (76.57 MU, 6.9%).

The above graph shows the electricity consumption by PCS EV charging stations along with Heavy-duty charging stations during the last 9 months i.e. from April, 2025 to Dec, 2025. Total electricity consumption in April, 2025 was 106.46 MU whereas in Dec, 2025, it was 129.66 MU.
