ACKNOWLEDGMENTS

The report on “Review of Performance of Thermal Power Stations 2017-18 is the forty second (42nd) publication of this series brought out by the Central Electricity Authority.

Successful completion of such a voluminous Report covering data from **633 thermal units in 189 Thermal Stations** would not have been possible without active cooperation of all.

I am thankful to all the Thermal Stations and utilities for furnishing operational data required for preparation of the Report and also responding timely to various queries/ clarifications etc.

I am thankful to various other divisions of CEA for inputs related to various chapters –Shri Hemant Jain Chief Engineer (Grid Management) and his team for inputs related to Grid operation; and Shri Ramesh kumar Chief Engineer (Fuel Management) and his team for inputs related to fuel supplies. Support of Information Technology division of CEA is also gratefully acknowledged.

Preparation of this Report has become possible through painstaking and untiring efforts of dedicated team of officers of OPM division comprising of Shri Girdhari Lal Director, Smt. Anita Verma, Deputy Director, Smt. Maya Kumari, Deputy Director and Smt. Inderpreet Kaur, Kumari Ritika and Shri Ajay Kumar Data Entry Operators. Their contributions are appreciated and gratefully acknowledged.

Sanjay Sharma
Chief Engineer (OPM)

OBJECTIVE OF THERMAL PERFORMANCE REVIEW

Under section 73(i) & (j) of the electricity act 2003, responsibility has been vested on Central Electricity Authority to collect & record the data concerning the generation, distribution and utilization of power and carryout studies related to Cost, Efficiency, Loss, Benefits and such like matters and also make public from time information secured under this act and to provide for the publication of reports and investigation.

Central Electricity Authority has been publishing the report on the '**Review of Performance of Thermal Power Stations**' by collecting and recording various operational data, such as unit wise generation, auxiliary consumption, outages (day in, day out, time in, time out and reasons for outages) and partial loss data (including its reasons) and analyzing the data to make the power sector/ utility aware about the following: -

- Unit wise performance indices of thermal power station in the country, such as, Plant Load Factor, Planned Maintenance, Forced Outage, Operating Availability, Partial Loss, Reserve shut down. The performance of the thermal units considered in the review is also arranged capacity group wise/make wise, sector wise and region wise. These performance indices are available for last three years for comparison and investigation.
- The average duration (day) in respect of Boiler overhaul, Capital overhaul and Long duration forced outage. The unit-wise details of boiler overhaul, Capital and long duration forced outage (more than 25 days) is also available in the review.
- The station-wise/ organization wise coal and gas consumption and auxiliary power consumption.
- All India major Grid Disturbances and areas affected.

The above information enables different power utilities/ manufacturers and other concerned to improve upon the process of generation of power and manufacture of equipment related to power. Also, it helps them benchmark the performance with the other generation companies and manufactures for the same kind of equipment so as to investigate and develop methodology, for future needs.

OVERVIEW

PARTICULARS	2013-14	2014-15	2015-16	2016-17	2017-18
ALL INDIA GENERATION (BU)	967.150	1048.67	1107.82	1160.14	1206.30
THERMAL GENERATION (BU)	792.48	878.32	943.79	994.23	1037.06
NUCLEAR GENERATION (BU)*	34.228	36.102	37.41	37.92	38.35
HYDRO GENERATION (BU)	140.448	134.25	126.62	127.99	130.90
THERMAL PLANT LOAD FACTOR (%) **	65.57	64.29	61.06	59.06	60.72
NUCLEAR PLANT LOAD FACTOR (%)	81.74	80.74	73.69	74.38	64.56

* Hydro generation includes import from Bhutan

** All Coal & lignite based stations

PERFORMANCE OF THERMAL STATIONS CONSIDERED IN THE REVIEW

PARTICULARS	2013-14	2014-15	2015-16	2016-17	2017-18
1. COAL & LIGNITE BASED UNITS REVIEWED					
(a) NUMBER OF UNITS	539	570	617	649	633
(b) CAPACITY (MW)	132625	147297	173291.5	189946.5	194336.5
(c) GROSS GENERATION (MU)	746090	835830	894541.9	943579.7	983896.9
2. FORCED OUTAGE (%)	17.64	19.05	21.9	24.52	25.04
3. PLANNED MAINTENANCE (%)	5.01	4.66	4.28	4.32	4.29
4. OPERATING AVAILABILITY FACTOR (%)	77.35	76.29	73.82	71.16	70.66

9. (a) AVERAGE TIME TAKEN IN DAYS FOR BOILER OVERHAUL	33	31	29	30	26
9. (b) AVERAGE TIME TAKEN IN DAYS FOR CAPITAL MAINTENANCE	43	35	35	47	57

HIGHLIGHTS

- The review covers the performance analysis of 633 coal/lignite based thermal units (25 MW & above capacity) aggregating to **194336.5 MW** installed in **189 thermal power stations**.
- All India electricity generation from conventional sources¹ in the country during 2017-18 has been **1206.306 BU** as compared to the generation of **1160.14 BU** during 2016-17 representing a growth rate of **3.98%**
- Thermal generation stood at 1037.06 BU representing a share of 85.97 % of total electricity generation from conventional sources in the country.
- Coal/ Lignite based plants continued to have major contribution with a major share of 95.13 % of the total thermal generation.
- During 2017-18, the total thermal generation achieved a growth rate of **4.31%**. Coal based generation recorded a growth rate of **4.57%**.
- The thermal generation in the country during 2017-18 was **99.52%** of its Programme fixed for the year.
- Operating Availability of **70.66%** was achieved for the units considered in the Review during the year 2017-18 as against 71.16% achieved during 2016-17.
- Thirty-one (31) out of 189 thermal stations achieved an Operating Availability more than 90% during 2017-18.
- All India Plant load factor (PLF) of thermal power units considered in the Review, increased to 59.22% during 2017-18, from 59.06% achieved during previous year. The Lower PLF was mainly due to increased generation loss due to Reserve Shut Down (RSD).
- Plant load factor (PLF) of Central Sector units was highest at 71.20%. The PLF of Private Utility increased from 58.49% during 2016-17 to 60.42% during 2017-18.
- Plant load factor (PLF) of BHEL/BHEL make units (385 units aggregating to 114200 MW) was **59.25%** . The China/China make group showed a PLF of **56.95%**
- Energy loss on account of planned maintenance was 4.29%² in 2017-18 as compared to 4.32% during 2016-17.
- The loss of generation due to forced outages during 2017-18 increased to 25.04% as compared to 24.52% during 2016-17. The increased forced outages were mainly due to higher RSD and coal/transmission constraints losses. The details are given in Section 4.
- The average duration of boiler overhaul and capital maintenance was achieved as 26 days and 57 days respectively.
- Following loss of generation due to various external constraints were reported by the utilities:

Sl. No.	Category	Energy (BU) (2016-17)	Energy (BU) (2017-18)
1	Shortage of coal	6.22	82.97
2	Wet/poor coal quality	0.12	0.93
3	Reserve shut down	133.97	93.15
4	Transmission constraints	7.45	4.78

¹ Thermal, Hydro and nuclear stations of capacity 25 MW and above

² All losses referred are with respect to maximum possible generation of units considered-MWh from date of stabilization to end of year at rated capacity.

Performance Review of Thermal Power Stations 2017-18

5.	Total	147.76	181.83
----	-------	---------------	---------------

- During the year 2017-18, the generation from gas based plants (including liquid fuel, Diesel etc.) was 50.21 BU in comparison to 47.12 BU in 2016-17. The gas based stations continued to operate at low PLF of 22.86% during 2017-18 – a marginal improvement over 22.51 % during 2016-17
- Energy loss due to partial unavailability of the thermal generating units operating in the country during 2017-18 had decreased to 10.96% of the maximum possible generation during the year in comparison to the 11.48% in 2016-17.
- The All India average auxiliary power consumption by the thermal stations during 2017-18 reduced slightly to 7.57% from 7.70% during 2016-17.

DEFINITIONS

The definitions of the different performance indices referred to in this review are as under: -

(i) **“Capacity”** means the installed or derated/uprated cap. accepted by CEA.

(ii) **Forced Outage/Unavailability (F.O. %)**

$$\frac{Cf1xHf1 + \dots \dots Cfn \times Hfn}{CxH} \times 100$$

Where Cf1 Cfn are the capacities in MW of the units on Forced outage and

Hf1 Hfn are the duration of each outage in hours. C is the total capacity in MW and H is the total hours in the period under review.

(iii) **Planned Maintenance/Planned Unavailability (P.M. %)**

$$= \frac{Cp1xHp1 \dots \dots Cpn \times Hpn}{CxH} \times 100$$

Where Cp1 Cpn are the capacities in MW of units on planned Shutdown and Hp1 Hpn are the duration of each shutdown in Hours in the periods under review.

(iv) **Operating Availability (Op Av.) % = 100 FO – PM**

(v) **Plant Load Factor :** $\frac{\text{Energy generated during the period}}{CxH} \times 100$

(vi) **Partial Unavailability :** $\frac{Cr1 Hr1 + \dots \dots C rn \times Hrn}{CxH} \times 100$

ABBREVIATIONS USED IN THE REPORT

Act.	Actual

SECTION-1 SCOPE OF THE REVIEW

1.1.SCOPE

The total installed capacity of thermal power stations in the country as on 31-03-2018 was **222402.09** MW comprising **196721.5** MW coal/lignite, **24842.96** MW gas turbines based stations and **837.63** MW diesel plants.

The Review **2017-18** covers the performance of **633** coal/lignite based thermal units (above 25 MW capacity) aggregating to **194,336.50** MW in **189** utility thermal power stations. New units which attained stabilization and considered for computation of PLF during the year **2017-18** have been included in the Review for performance analysis.

The **633** coal/lignite based thermal units includes **614** number of units considered in the previous publication and **19** new units with **9235.0 MW** total capacity, which were synchronized and reckoned for Plant Load Factor (PLF) calculation during the year **2017-18**. However, it does not cover 35 units aggregating to 3625 MW capacity which retired during the year (Details given in Annex 1.2). Details of units covered in the review are as under:

S. No.	Unit Details	No. of Units	Capacity (MW)
1	Units considered in Review 2016-17	649	1,89,946.5
2	New units Synchronized during 2016-17 and 2017-18 and considered in the review and IPP units consider for the first time (details is given in the Annexure 1.1)	19	9,235.0
3	Units covered in Review of 2016-17 but not considered in the present review due to retirement (details is given in the Annexure 1.2)	35	(-)3645
4.	Capacity changes in existing units	2	(-) 1200
5.	Units Considered in the review (details is given in the Annexure 1.4)	633	1,94,336.5

Details of new units synchronized during 2016-17 and **2017-18** and considered in the review for the first time are given in Annexure-1.1.

Details of Units retired during 2016-17 and not considered in the present review are given in Annexure- 1.2.

Details of units retired during the year **2017-18** but considered in the review are given Annexure-1.3. These units will not be considered in subsequent publications.

Details of capacity changes in units during the year **2017-18** due to upration/deration are given Annexure-1.4.

The details of total units (different make) considered in the review are given at Annexure 1.5.

Details of new units which although commissioned during **2017-18** but not considered in the review as the stabilization was not achieved during this period are given at Annexure 1.6.

SECTION-2 GENERATION PERFORMANCE

2.1 OVERALL GENERATION PERFORMANCE

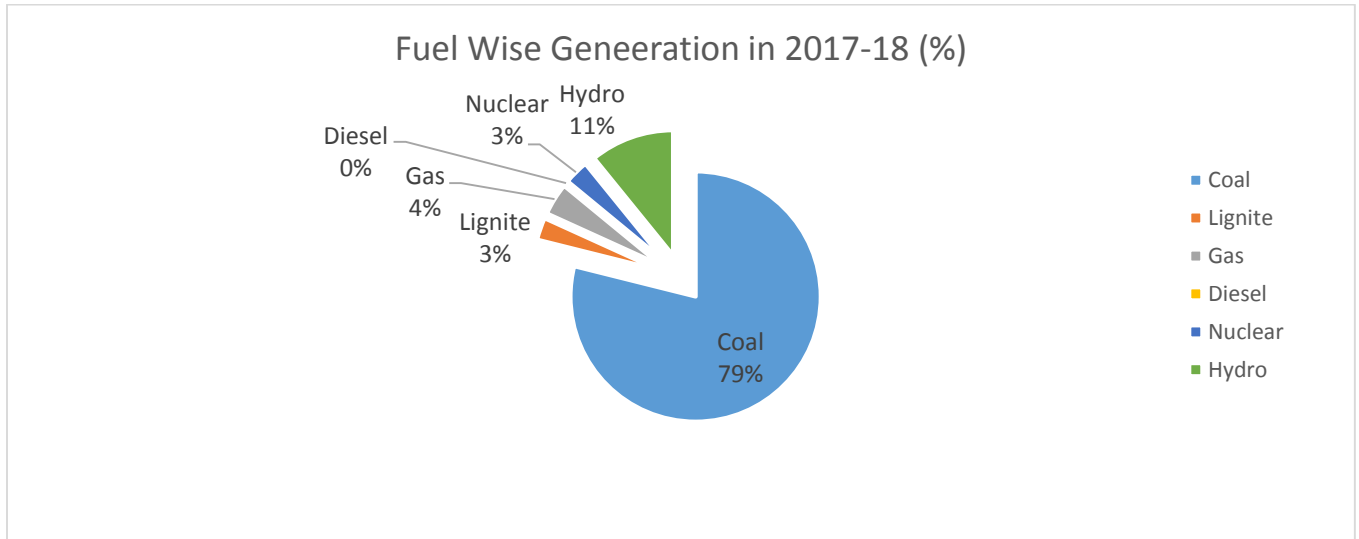

In making performance assessment, several indices like Forced Outage (FO), Planned Maintenance (PM), Operating Availability (Op. Av.), Partial unavailability (Partial loss) and the Plant Load Factor (PLF) have been considered for evaluating the overall performance of thermal power station for the purpose of analysis. No single performance index has been taken as the sole indication of overall performance. A detailed review of generation with reference to the program and PLF is brought out in this section while the other performance indices are covered in Sections 3 to 7.

All India program³ for electricity generation for the year 2017-18 was fixed at **1229.4** BU and Generation achieved during the year was **1206.306** BU, which was **98.12%** of the program, indicating a growth rate of **3.98%** over the year 2016-17. Details of program and actual generation, are given below: -

Category	Program Generation (BU)	Actual Generation (BU)	Short fall (-) / Surplus (+) (BU)	% of Program 2017-18	Actual 2017-18 as (% of Actual 2016-17)	Growth over 2016-17 (%)
Thermal						
Coal based Stations	958.442	951.754	-6.688	99.30	104.57	4.57

Bhutan Import	5	4.78	-0.22	95.57	85.06	-14.94
Total	1229.4	1206.31	-23.09	98.12	103.98	3.98

Details of generation from various fuels and share in various fuels in total generation during the year 2017-18, are presented in the figure below

³ All Program and Generation figures in this Review refer to generation from conventional sources (thermal/hydro/nuclear) of capacity greater than 25 MW in utility stations

Salient observations on fuel wise performance of generating stations in the country during the year 2017-18 are as follows:

- Total thermal generation was lower by 4.97 BU than program estimation for the year - major contributors being coal and lignite based plants with short falls of 6.69 BU and 1.13 BU respectively vis-à-vis program. However, the gas based generation exceeded the programme by 2.84 BU
- Total thermal generation has achieved a growth rate of 4.31% over the last year. Coal and lignite based generation recorded a growth rate of 4.57 % and 0.32% respectively.
- Nuclear generation achieved a growth of 1.13% while hydro generation achieved a growth of 3.06%.

2.2 PERFORMANCE OF THERMAL GENERATION AND REASONS FOR SHORTFALL

Region wise performance

Thermal generation in Northern, Southern, Eastern and North Eastern Regions remained below their respective program. However, the generation in Western Regions exceeded program. Region-wise generation performance of thermal power stations during the year under review are given below: -

Region/ Category	Program(MU)	Actual (MU)	Short fall(-)/ Surplus(+)(MU)
NORTHERN	225970	225643	-327
WESTERN	407413	426149	18736
SOUTHERN	223987	206045	-17942
EASTERN	173789	168908	-4881
NORTH EASTERN	10869	10314	-555
TOTAL THERMAL	1042028	1037059	-4969

Sector wise performance

Sector-wise generation performance during 2017-18 is given below. Thermal power stations in Central Sector and State Sector have generated 104.82 % and 94.47% of their generation program. Generation in Private Sector Stations was 101.39 % of the program.

Category / Sectors	Monitored Capacity as on 31.03.2018 (MW)	April 2017 - March 2018		Actual Generation 2016-17 (MU)	% of Program	Growth (%)

March 2018	92637	1042028	95688	1037059	90330	994230

Month-wise and cumulative thermal generation growth during the year 2017-18 vis-à-vis last year 2016-17 is depicted in the following chart: -

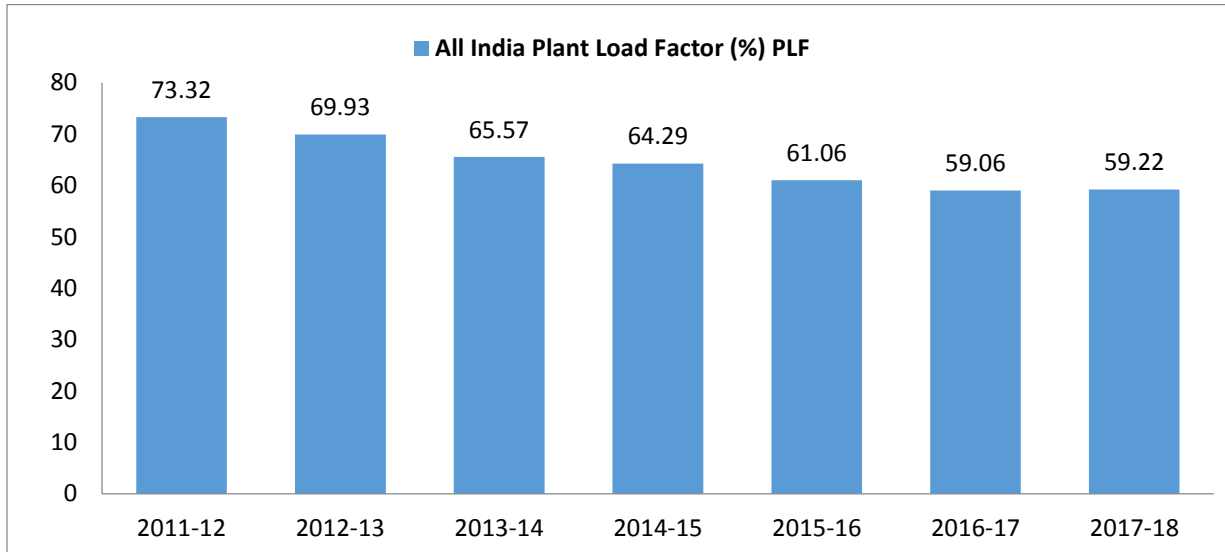

- Total monthly thermal generation varied from 78.63 BU in July'17 to the maximum of 95.69 BU in March'18.
- Thermal generation achieved a growth rate of 4.31% during the year 2017-18 and generation was less than the program by 4.97 BU.
- Units wise and station wise performance indices for the year 2017-18 are given in Annexure-2.1

2.3 PLANT LOAD FACTOR (PLF%) – for units considered in the Review

National average ⁴PLF of coal/lignite based plants during the financial year 2017-18 increased to 59.22 % against 59.06% during 2016-17.

The details of PLF from financial year 2010-11 onwards are depicted in the following chart:

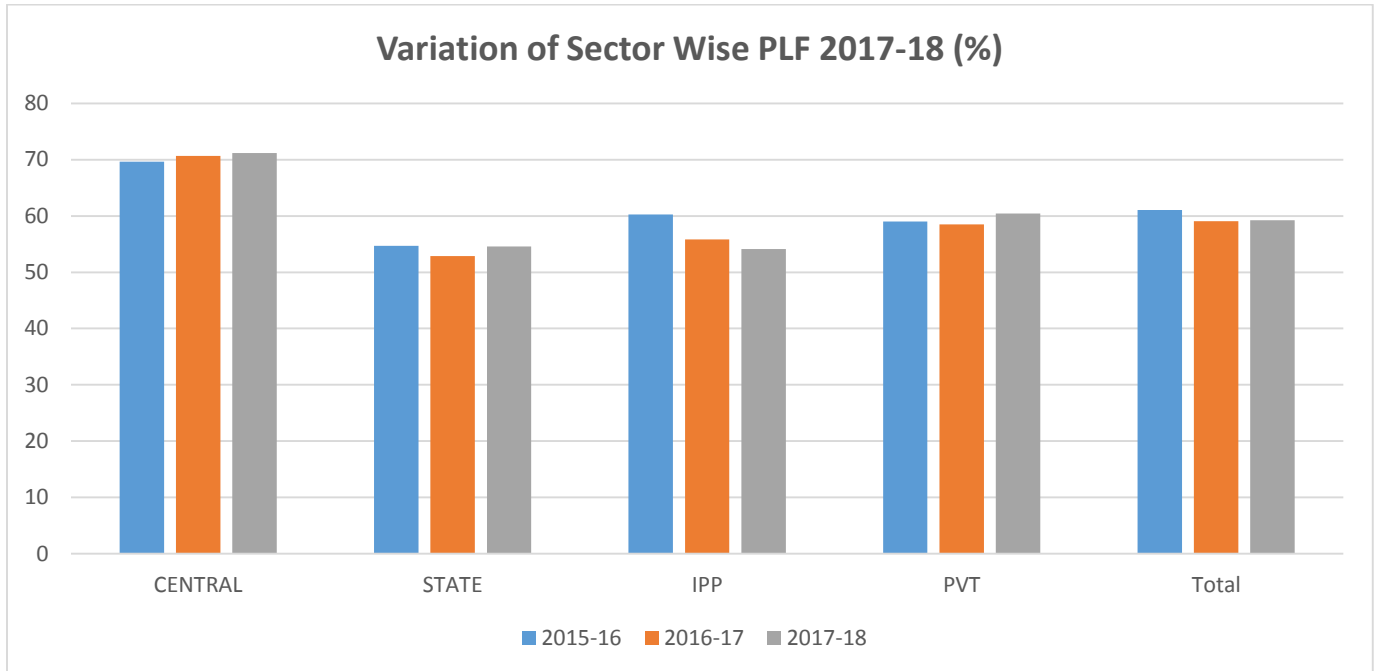

⁴ PLF of units considered in the Review

Sector-wise Plant Load Factor (PLF)

During 2017-18, Central Sector Stations achieved highest PLF of 71.2 % amongst all the Sectors. The overall PLF of thermal generating units was higher (59.22 %) as compared to previous year (59.06%). Sector wise PLF of thermal power plants during the last three years are given in the following table:

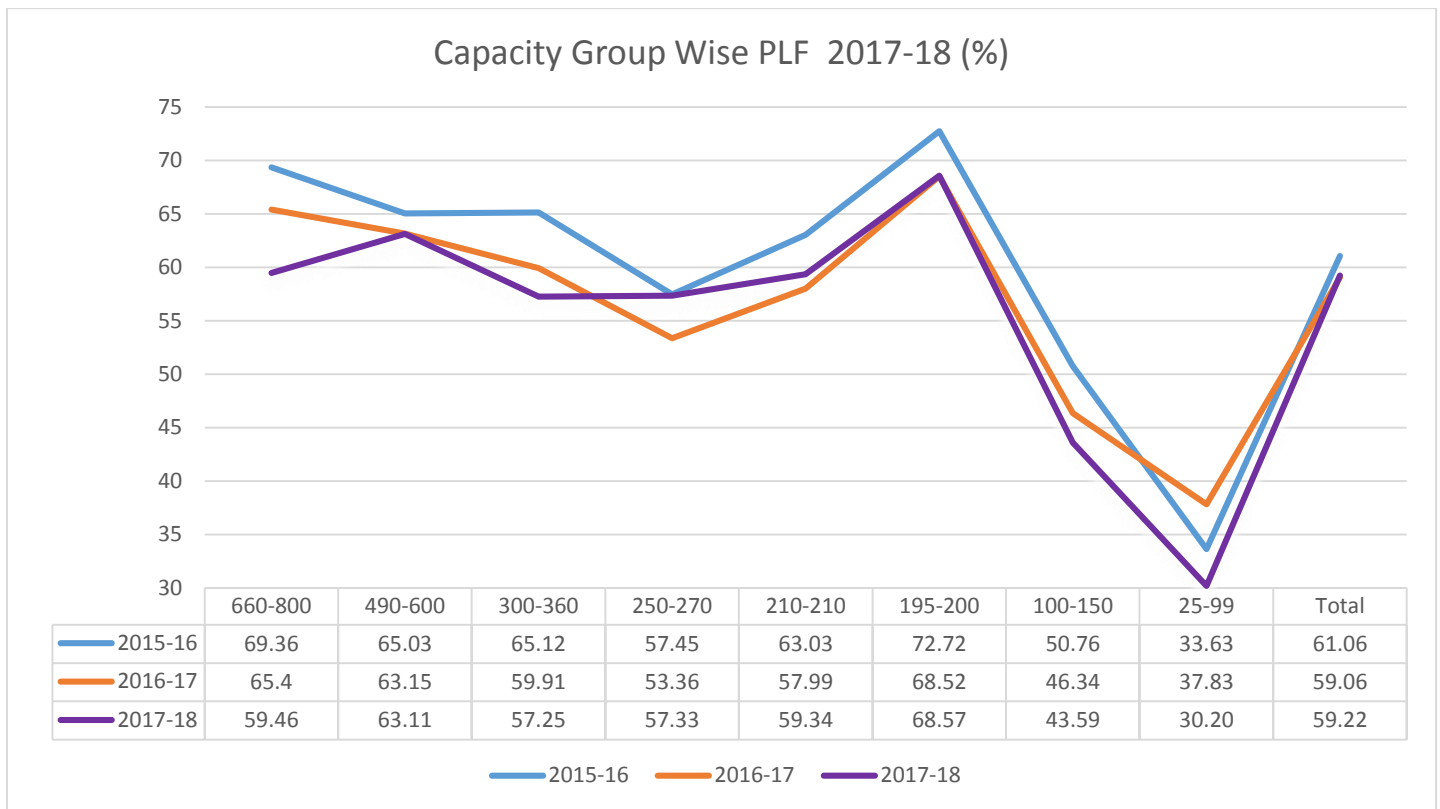

Sector	Capacity (MW)			Plant Load Factor (%)		
	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18
CENTRAL	50,515.0	52370.0	55910	69.63	70.66	71.2
STATE	57,820.5	64450.0	64410.5	54.72	52.85	54.58
IPP	61,349.0	69519.0	70269	60.26	55.82	54.14
PVT	3,607.0	3,607.0	3297	59	58.49	60.42
Total	173,291.5	189946.5	193886.5	61.06	59.06	59.22

Capacity group-wise Plant Load Factor

Details of PLF of thermal units under review falling under various capacity groups are given below. The 195-200 MW capacity group achieved the highest PF of 68.57 %, followed by the 490-600 MW capacity group which achieved a plant load factor of 63.11%. Supercritical unit capacity group achieved a plant lower factor of 59.46%

Capacity Group (MW)	Units commissioned as on 31-MAR-2018		Units Reviewed		PLF (%) of units Reviewed		
	No. of Units	Capacity (MW)	No. of Units	Capacity (MW)	2015-16	2016-17	2017-18
660-800	66	45550	62	42630	69.36	65.4	59.46
490-600	134	71370	134	71370	65.03	63.15	63.11
300-360	43	13400	42	13100	65.12	59.91	57.25
250-270	79	20050	73	18470	57.45	53.36	57.33
210-210	137	28770	140	29400	63.03	57.99	59.34
195-200	26	5180	26	5180	72.72	68.52	68.57
100-150	75	9332	82	10117	50.76	46.34	43.59
25-99	61	3069.5	74	4069.5	33.63	37.83	30.20
Total	621	196721.5	633	194336.5	61.06	59.06	59.22

Make-wise PLF

The PLF of different makes wise units taken in the review during last three years is given as under. The PLF of BHEL/BHEL make units reduced from 60.68% during 2016-17 to 58.63 % during 2017-18. Reduction is also seen in PLF of China/China make units.

As may be seen, out of 649 units reviewed, the highest numbers of units (380 numbers with aggregate capacity 109770 MW) were of BHEL/BHEL make.

SECTION-3 PLANNED MAINTENANCE

- 3.1** Planned Maintenance covers maintenance works that are planned/scheduled in advance (before the beginning of the year). The Planned Maintenance works carried out can be broadly classified as – Annual Maintenance (generally covers boiler and auxiliaries) and Capital Maintenance which covers both Boiler and Turbine Generator. The Capital Maintenance is generally carried out once in 5 to 6 years. Generally, a five/six year rolling plan is followed for Planned Maintenance which leads to an average annual outage of 28 days for units of 200/210/500 MW capacity. Other Planned Maintenance works include Boiler inspection/recertification, Renovation & Modernization and Other activities like Performance Guarantee (PG) Test of new units & Residual Life Assessment (RLA) studies on old units.
- 3.2** During 2017-18, the total duration for carrying out various Planned Maintenance works was **2,73,067.21** hours. Out of total **633** units analyzed for the year, Capital Maintenance was carried out on **14 generating** units and Annual Maintenance was carried out on **199** generating units. The All India energy loss during the year, on account of Planned Maintenance actually carried out was **4.3%** (of the maximum possible generation) against a program of **4.09%** (considering all units scheduled for Planned Maintenance). The average duration of unit outage for Boiler inspection/ Re-Certification was **8** days & ⁵Scheduled Duration of 9 days. The average duration of unit outage for Capital Maintenance was **57** days which was same as the schedule duration of 57 days and is considerably higher than the last year (2016-17) duration of 47 days. However, if two units which involved very high capital maintenance duration are ignored than the average duration for 12 units works out to be 47 days. The details of Planned Maintenance of thermal stations for the year 2017-18 are shown below:

Work	No. of Units	Capacity of the units involved (MW)	Average duration (Days)	Energy Loss (MU)	Energy loss as % of max possible generation of Overall Capacity
1. Annual Maintenance					
i) Programme	273	72721	22	41184.17	2.49
ii) Actual	199	57019.5	26	39594.31	2.40
2. Capital Maintenance					
i) Programme	50	16055	50	18129.84	1.1
ii) Actual	14	3520	57	4799.73	0.29
3. Total Annual and Capital Maintenance					
i) Programme	323	88776	27	59314.01	3.59
ii) Actual	213	60539.5	28	44394.03	2.69
4. R&M Works					
i) Programme	5	945	208	5082.84	0.31
ii) Actual	9	1539	227	7393.1	0.45
5. Boiler Inspection/ Re-Certification					
i) Programme	55	13127.5	9	3126.6	0.19
ii) Actual	35	9880	8	2351.26	0.14
6. Other Planned Maintenance including PG Test of new units & RLA studies					

⁵ Scheduled/Programme/ durations are based on average of Schedule/Programme durations for individual units furnished by Stations.

Work	No. of Units	Capacity of the units involved (MW)	Average duration (Days)	Energy Loss (MU)	Energy loss as % of max possible generation of Overall Capacity
ii) Actual	32	9950	94	16766.43	1.02
7. Grand Total					
i) Programme	383	102848.5	26	67523.45	4.09
ii) Actual**	276	78283.5	39	70904.82	4.29
* Other maintenance work includes miscellaneous Preventative Maintenance, short duration Planned Maintenance and R&M works.					
** Grand Total may not match with sub totals due to duplication of units.					

3.3 Annual Maintenance was carried out on **199** units, out of **273** units scheduled for Annual Maintenance during 2017-18, - thus **72.89%** of the thermal units scheduled for Annual Maintenance actually carried out Annual Maintenance. Capital Maintenance was carried out on **14** units out of total **50** units scheduled - thus only **28%** units scheduled for Capital Maintenance actually carried out Capital Maintenance. Actual Planned Maintenance figures include all such units, which first went under forced outage, & subsequently Annual/Capital Maintenance was taken up on them. Details of units scheduled/programmed for Annual Maintenance and Capital Maintenance and the numbers actually taken out during 2017-18 are given below: -

Particulars	Annual Maintenance				Capital Maintenance			
	2014-15	2015-16	2016-17	2017-18	2014-15	2015-16	2016-17	2017-18
Nos. Programmed for overhaul	242	283	233	273	84	65	50	50
Nos. actually taken out including those taken unscheduled	205	226	183	199	18	22	28	14
Percentage of Program	84.71%	79.86%	78.54%	72.89%	21.43%	33.85%	56%	28%

The Unit wise details of Planned Maintenance durations during 2017-18 are given in **Annexure 3.1**. The maintenance duration mentioned are the duration during the year 2017-18, though maintenance works on certain units had started in the previous year (before 1-4-2017) or have continued beyond the current year (beyond 31-03-2018) thus indicating very low maintenance durations for some of the units. However, for computing the average actual maintenance durations, the total duration of Planned Maintenance for such units have been taken.

In some cases, the Planned Maintenance has been done in more than one outages – short outage for exploratory works and then actual maintenance and so very short outages are also seen. Also certain units taken exceptionally long to complete maintenance.

3.4 CAPACITY GROUPWISE MAINTENANCE (NUMBER OF UNITS)

3.4.1 The All India capacity group wise, Planned Maintenance details in terms of number of units Scheduled for Planned Maintenance and actually taken out for Planned Maintenance during the year 2017-18 are given below:

Particulars	660-800	490-600	300-360	250-270	210-210	195-200	100-150	25-99	Total

SECTION-4 FORCED OUTAGES

4.1 Based on the analysis carried out for 633 thermal power generating units, it is seen that forced outages of generating units were due to various problems in generating equipment, auxiliary systems and also due to external reasons viz., shortage of fuel, transmission system constraints, lower demand/ schedules etc.

During the financial year 2017-18, the loss of generation on account of forced outages of units increased to **413.52 BU 315.43 BU** from 386.18 BU in 2016-17. Forced outages loss increased marginally to **25.04%** of the maximum possible generation in 2017-18 from **24.52%** during 2016-17. The All India energy loss due to forced outage of units considered in the review as the percentage of their maximum possible generation⁶ calculated on the basis of rated capacity of the units from year 2012-13 onwards are depicted below:

As may be seen from the chart, the losses on account of RSD (Reserve Shutdown - when units remain out of operation due to lack of schedule/dispatch) have increased constantly and significantly. **The FO loss due to RSD was less than 1 % in 2012-13 and increased to around 9 % in 2016-17 and has remained quiet high at around 6% in 2017-18.**

4.2 Forced outages due to the main equipment faults accounted for **28.14%** of the total forced outages loss as per details given in the table below:

	Cause of Outage	Percentage of total forced outage losses including losses due to					
		2012-13	2013-14	2014-15	2015-16	2016-17	2017-18

4.3 EQUIPMENT OUTAGES:

A. Boiler

The generation loss due to Boiler problems decreased from **4.23%** of maximum possible generation during 2016-17 to **3.91%** during 2017-18. Tube leakages and air preheater problems were the main cause of boiler forced outages. A comparison of area/causes of outages in boiler during 2015-16, 2016-17 and 2017-18 is given below:

Sl. No.	Area/ cause of outages	No. of outages			Loss (MU)			% age of Max. possible gen.		
		2015-16	2016-17	2017-18	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18

B. Turbine

The generation loss due to Turbine problems increased from **1.12%** of maximum possible generation during 2016-17 to **1.6%** during 2017-18. Turbine bearings and eccentricity/vibrations, main steam line problem and condenser tube leakages were major causes for turbine forced outages. A comparison of area/causes of outages in turbine during 2014-15, 2015-16 and 2017-18 is given below:

Sl. No.	Area/ cause of outages	No. of Outages			Loss (MU)			% age of Max.		
		2015-16	2016-17	2017-18	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18

C. Generator

The generation loss due to Generator problems increased from **0.59%** of maximum possible generation during 2016-17 to **1.54%** during 2017-18. Earth fault, Generator transformer tripping and generator protection/relay operation and hydrogen pressure were the main causes of generator outages. A comparison of areas/causes of outages in generator during 2015-16, 2016-17 and 2017-18 is given below:

Sl. No.	Area/ cause of outages	No. of Outages			Loss (MU)			% age of Max. possible gen.		
		2015-16	2016-17	2017-18	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18

E. FUEL SUPPLY AND OTHER MISC. PROBLEMS:

There was a sharp increase in generation loss on account of shutdown of thermal units due to Coal and Lignite shortage to **82971.9 MU** in 2017-18 from **6218.47 MU** in the previous year. Withdrawal of units from operation due to being uneconomical or vintage units also contributed significantly to losses- over **7500 MU**.

F. GRID SYSTEM AND LOW SYSTEM DEMAND

About one third of total Forced outage losses occurred on account of low system demand and transmission/grid related constraints. Energy loss due to Reserve shutdown decreased from **133975.17 MU** in 2016-17 to **93149.69 MU** during 2017-18 and the generation loss due to transmission constraints decreased from **7450.97 MU** to 4779.56 MU.

Details of generation losses due to transmission constraints/ grid system problems and reserve shut down during 2015-16,2016-17 and 2017-18 are given below:-

Sl. No.	Area/ cause of outages	No. of Outages			Loss (MU)			% age of Max. possible

4.5 FREQUENCY OF OUTAGES AND ENERGY LOSS

4.5.1 Region-wise frequency of outages/ tripping of equipment and related energy loss during 2016-17 and 2017-18 are shown in the **Annexure 4.1**.

4.5.2 Details of Average loss per outage (in MU) due to failure of equipment and auxiliaries from the years 2012-13 to 2017-18 is shown below: -

Sl. No.	Outages	Average Loss/Outage (MU)					
		2012-13	2013-14	2014-15	2015-16	2016-17	2017-18
I. Equipment							
	1. Boiler	11.85	13	17.63	17.84	26.78	28.32
	2. Turbine	19.17	26.59	29.6	21.33	28.00	51.17
	3. Generator	10.79	24.19	50.57	29.21	21.57	67.62
	4. Total Equipment	13.09	16.62	23.64	19.80	26.37	36.7
II. Auxiliaries							
	1. Boiler Aux.	24.87	21.41	25.76	19.17	17.35	18.84
	2. Turbine Aux.	14.21	7.61	24.7	18.63	25.33	23.19
	3. Total Aux.	21	16.18	25.43	18.98	20.42	20.16
III.	Boiler & Aux.	13.82	14.27	18.81	18.05	25.39	26.96
IV.	Turbine & Aux.	17.8	20.89	28.29	20.51	27.20	44.33
V.	Generator	10.79	24.19	50.57	29.21	21.57	67.62
VI.	Other Misc. Problems	17.76	42.84	63.08	89.02	94.60	115.6
	Total (Excl. RSD)	14.82	19.67	31.41	32.77	40.51	58.23
VII.	Reserve Shut Down	28.29	78.23	83.69	122.24	131.07	126.74

Sl. No.	Outages	Average Loss/Outage (MU)					2017-18
		2012-13	2013-14	2014-15	2015-16	2016-17	
	Total (Incl. RSD)	15.56	25.53	36.82	44.63	53.75	66.76

The Average losses per Outage increased from 53.75 MU during 2016-17 to 66.76 MU during 2017-18. This was mainly due to considerable increase in RSD loss in 2017-18.

4.6 DURATION PATTERN OF FORCED OUTAGES

4.6.1 There were a total of about **6200** forced outages / tripping with aggregate duration of **over 2 million** outage hours during the year 2017-18. The duration of individual outage varied from few hours to the maximum of full year. The duration pattern of forced outages of thermal units during the year 2017-18 in the country is given at **Annexure-4.2**.

4.7 LONG DURATION FORCED OUTAGES

4.7.1 Energy loss (in MUs) due to forced outages of more than 25 days during the year 2017-18 contributed to 67.60% of total forced outage losses. Details of units under forced outages for more than 25 days are given in Annexure 4.3. Western Region has maximum loss (124766.02 MU) due to long forced outage and North Eastern Region had minimum MU loss (525.6 MU).

4.8 DURATION PATTERN OF BOILER TUBE LEAKAGE

4.8.1 WATER WALL TUBE LEAKAGE

Duration pattern of forced outages due to water wall tube leakage during last three years is shown below: -

Period in days	2015-16(617 Units)			2016-17(649 units)			2017-18(633 units)		
	No. of	No. of	Loss	No. of	No. of	Loss	No. of	No. of	Loss
Upto-2 days	208	379	3000.04	186	346	3237.36	211	394	3799.66
>2 & up to 3	123	179	2805.39	122	185	3365.12	127	184	3929.32
>3 & up to 4	74	100	2626.75	65	86	2352.61	69	96	2886.94
>4 & up to 5	50	61	1872.31	40	42	1306.90	36	43	1526.26
>5 & up to 6	20	23	624.21	21	22	888.96	27	32	1542.24
>6 & up to 7	18	18	793.86	14	15	903.01	15	16	1018.48
>7 & up to 14	34	41	2676.47	29	38	2118.83	36	41	2913.4
>14 & up to 21	10	14	768.28	14	15	1849.14	15	17	2285.36
>21& up to 28	2	2	546.24	6	6	1277.21	7	7	1447.97
>28 & up to 30	1	1	141.16	0			1	1	49.19
> 30 days	12	20	4019.15	18	25	9181.49	18	24	4838.15
Total	324	838	19,873.85	313	780	26480.62	334	855	26236.97

As may be seen, the number of Water wall tube leakages has come down significantly over the years and the outages in 2017-18 were lower despite higher number of units reviewed. Also most of the WW leakages involved outages of less than 4 days and almost half of the outages have been for less than 2 days' duration.

4.8.2 SUPERHEATER TUBE LEAKAGE

Duration pattern of forced outages due to super heater tube leakage problems during last three years is shown below.

Period in days	2015-16 (617 units)			2016-17(649 units)			2017-18(633 units)		
	No. of	No. of	Loss (MU)	No. of	No. of	Loss (MU)	No. of	No. of	Loss (MU)
Upto-2 days	45	78	464.36	49	91	520.65	24	42	234.03
>2 & up to 3	29	30	430.32	33	37	683.59	24	25	333.31
>3 & up to 4	9	10	164.65	13	21	285.90	12	13	289.71

Period in days	2015-16 (617 units)			2016-17(649 units)			2017-18(633 units)		
	No. of	No. of	Loss (MU)	No. of	No. of	Loss (MU)	No. of	No. of	Loss (MU)
>4 & up to 5	7	7	232.66	8	10	118.01	5	5	122.82

> 30 days	3	3	2413.15	3	4	581.62	5	5	401.72
Total	131	258	5620.78	132	229	3492.17	101	176	3171.95

4.9 BOILER TUBE LEAKAGEDURATIONPATTERN (CAPACITY GROUPWISE)

Capacity group-wise details of boiler tube leakage problems during the year 2017-18 are given below:

Capacity (MW)	No. of Units	Water Wall		Super heater		Economizer		Re-heater		Total	
		No. of	No. of	No. of	No. of	No. of	No. of	No. of	No. of	No. of	No. of
660-800	62	28	152	7	16	4	12	4	14	34	194
490-600	134	91	261	8	8	21	24	17	19	99	312
300-360	41	15	21	1	1	2	2	3	3	15	27

Capacity (MW)	No. of Units	Water Wall		Super heater		Economizer		Re-heater		Total	
		No. of	No. of	No. of	No. of	No. of	No. of	No. of	No. of	No. of	No. of
250-270	73	32	67	14	18	15	21	5	5	43	111
210-210	140	88	186	18	31	32	68	27	46	106	331
195-200	26	20	36	2	2	2	5	3	4	20	47
100-150	81	30	113	5	9	12	22	5	5	34	149
25-99	72	30	95	13	29	13	28	1	2	34	154
Total	691	362	1083	75	130	105	194	69	112	419	1519

It is seen that the incidences of tube failures have been significantly lower in the supercritical units (660-800 MW group) amongst all capacity groups.

4.10 FORCED OUTAGE – UTILITY WISE

The forced outages of thermal generating units under various Central Sector Utilities, Private Sector and State Electricity Boards- /-Power Generating Corporations, is given below:

4.11 REGION WISE PERFORMANCE

Southern Region had the lowest energy loss due to forced outages & NE region showed highest energy loss due to forced outages. The region wise summary of forced outages of thermal generating units is given below:

Sl. No.	REGION	No. of Units	Capacity (MW)	FORCED OUTAGE				
				No. of Units	Capacity (MW)	Duration (Hrs.)	Energy Loss (MU)	Energy Loss as % of Max. Possible generation OF Regional capacity
1	NORTHERN	153	42303	149	42309	726603.6	97477.34	26.61
2	WESTERN	233	79111	231	78351	638226.41	179414.85	26.64

SECTION-5 OPERATING AVAILABILITY

5.1 Based on the Planned Maintenance undertaken and Forced Outages occurred as brought out in Section 3 and 4 respectively, the Operating Availability for the 649 Thermal Generating Units aggregating to **1,89,946.5 MW**, covered in the Review, has been computed in this section.

During the year 2017-18, the overall Operating Availability of **71.16%** has been achieved by the generating units under review. It was lower than the overall Operating Availability of 73.82% achieved during last year. Main reasons for lower Operating Availability vis-à-vis 2017-16 is the increase in losses due to Reserve Shut Down, No Power Purchase Agreement and coal shortages. Slightly higher losses on account of equipment outages were also seen in 2017-18 and the planned maintenance was also slightly higher as compared to 2017-16. Details of various components of Forced outage/shutdown and losses have been detailed in Section 4.

Forced and planned shutdown and corresponding Operating Availability of units reviewed from 2004-05 onwards are shown below:

OPERATING AVAILABILITY				
YEAR	Unavailability (%)			Operating Availability (%)
	Planned	Forced	Total	
2004-05	8.23	8.84	17.07	82.93
2005-06	9.48	8.74	18.22	81.78
2006-07	8.43	7.85	16.28	83.72
2007-08	7.54	7.71	15.23	83.72
2008-09	5.66	9.29	14.95	85.05
2009-10	6.17	8.25	14.42	85.58
2010-11	5.84	10.31	16.15	83.85
2011-12	5.93	11.46	17.39	82.61
2012-13	5.71	13.6	19.31	80.70
2013-14	5.01	17.65	22.66	77.34
2014-15	4.66	19.05	23.71	76.29
2015-16	4.28	21.90	26.18	73.82
2016-17	4.32	24.52	28.84	71.16
2017-18	4.30	25.04	29.34	70.66

5.2 UNITWISE/ STATIONWISE OPERATING AVAILABILITY

The details of the stations/units showing highest Operating Availability during the year 2017-18 are highlighted below.

- Thirty-one Thermal Power stations achieved Operating Availability between 90% to 99%.
- Nine generating units achieved Operating Availability of more than 99 %. Some units achieved Operating Availability of 100% but these were mostly units commissioned towards the end of the year with short operating period.
- The details of these Thermal stations/generating units are as follows: -

Thermal Stations achieving the Operating Availability of 99 % to 90%

Stations with Operating Availability (%) more than 90% during 2017-18					
SL. NO.	STATION NAME	ORGANISATION NAME	STATE NAME	CAPACITY	OP. AV. (%)

5.3 SECTORWISE OPERATING AVAILABILITY

5.3.1 Among different Sectors, the Central Sector achieved highest overall Operating Availability of 83.54 % during 2017-18 and this was higher than the last year Operating Availability of 81.21 %. The Operating Availability of Private sector decreased to 65.87% from 68.67% during 2017-18. The Operating Availability of State sector was 65.17 % vis-à-vis 65.54 % in 2017-18. The Sector Wise Planned Maintenance, forced outages and Operating Availability of generating units for the last three years were as under: -

SECTOR	Planned Maintenance (%)			Forced Outage (%)			Operating Availability (%) (100-PM%-FO %)		
	15-16	16-17	2017-18	15-16	16-17	2017-18	15-16	16-17	2017-18
1. Central	4.71	4.93	4.73	14.74	13.86	11.73	80.55	81.21	83.54
2. State	5.34	5.88	5.84	26.30	28.58	28.99	68.36	65.54	65.17
3. Private	2.93	2.53	2.64	23.50	28.80	31.49	73.57	68.67	65.87

5.4 CAPACITY GROUP WISE OPERATING AVAILABILITY

5.4.1 The capacity group wise Planned Maintenance, Forced Outages and Operating Availability for 2017-18 and previous two years is given in the Table below. The Operating Availability of capacity group 25-99 MW has decreased significantly – the main causes are Reserve Shut Down, vintage units closed for operation and commercial reasons in some units. The Operating Availability of 210 MW capacity group has also dropped sharply due to significantly higher RSD losses.

Capacity Group	Planned Maintenance (%)			Forced Outages (%)			Operating Availability (%)		
	15-16	16-17	2017-18	15-16	16-17	2017-18	15-16	16-17	2017-18
660-800	2.72	2.97	2.78	16.66	19.52	26.77	80.62	77.51	70.45
490-600	4.16	4.46	4.15	18.26	20.11	20.27	77.58	75.43	75.58
300-360	1.99	2.56	2.5	17.45	22.47	26.64	80.56	74.97	70.86
250-250	4.31	2.97	3.35	29.79	35.27	30.38	65.90	61.76	66.27
210-210	4.74	4.70	6.21	22.02	28.58	23.86	73.24	66.72	69.93
195-200	11.81	10.40	9.46	7.53	12.06	11.24	80.66	77.54	79.3
100-150	5.39	8.23	7.82	38.48	41.92	41.39	56.13	49.85	50.79
25-99	5.56	6.52	5.09	50.62	54.55	55.74	43.82	38.93	39.17
ALL INDIA	4.28	4.32	4.32	21.90	24.52	25.04	73.82	71.16	70.66

5.5 REGIONWISE OPERATING AVAILABILITY

Southern Region had the highest overall Operating Availability of 79.29% followed by NE region with Operating Availability of 77.56 %. All other regions had Operating Availability of around 70%..The Region-wise Planned Maintenance, Forced outages and Operating Availability of generating units for the year 2017-18are furnished as under: -

Region	Planned Maintenance (%)	Forced Outage (%)	Operating Availability (%)
NORTHERN	4.38	26.61	69.01
WESTERN	4.18	26.64	69.18
SOUTHERN	5.04	22.52	72.44
EASTERN	3.37	22.11	74.52
NORTH EASTERN	22.6	21.21	56.19

Region	Planned Maintenance (%)	Forced Outage (%)	Operating Availability (%)
ALL INDIA TOTAL	4.3	25.04	70.66

5.6 MAKEWISE OPERATING AVAILABILITY:

5.6.1 The Planned Maintenance Forced outage and Operating Availability of units of different make during 2017-18 and previous two years were as under:

Make of Units TG / BOILER	Planned Maintenance (%)			Forced Outage (%)			Operating Availability (%)		
	15-16	16-17	2017-18	15-16	16-17	2017-18	15-16	16-17	2017-18
BHEL/BHEL	4.88	4.84	5.04	23.12	25.81	24.82	72.00	69.35	70.14
BHEL/ABL	3.89	1.20	3.65	47.21	43.05	29.88	48.9	55.75	66.47
CHINA/CHINA	2.77	3.44	2.44	19.87	22.99	27.26	77.36	73.57	70.3
RUSSIA/RUSSIA	5.34	4.15	5.24	17.99	13.94	8.05	76.67	81.91	86.71
OTHER	4.38	4.12	4.38	19.86	21.42	23.58	75.76	74.46	72.04
ALL MAKE	4.28	4.32	4.3	22.20	24.52	25.04	73.52	71.16	70.66

As may be seen, the Operating Availability of 86.71% achieved by RUSSIA/RUSSIA make units was the highest among the units of different makes. However, this is a small Capacity Group with major share of central sector units which had very high Operating Availability.

5.6.2 Major share of the units/capacity belongs to China/China and BHEL/BHEL make groups – While BHEL/BHEL group shows marginal increase in Operating Availability, the China/China group has shown sharp decline in Operating Availability vis-à-vis 2017-18. Both, China/China and BHEL/BHEL make groups show similar Operating Availability of **about 70 %**; however, there is a remarkable difference between these groups in the losses/outages due to Reserve Shut Down (RSD) and other such outages not attributable to unit performance. BHEL/BHEL make units have higher such losses as compared to China/China make group and thus accounting for the above factor, the BHEL/BHEL make shows slightly considerably higher Operating Availability than the China/China make.

Further, the share of larger size units (more than 500 MW) is around 68 % in China/China make group which is much higher than the BHEL/BHEL make group where this share is around 50 %. As may be seen from table at 5.4.1, the larger size Capacity Group have much higher Operating Availability. Thus considering the above aspect, the Operating Availability of BHEL/BHEL make group would be further higher than the China/China group

5.6.3 The Other/Other make group also showed high Operating Availability due to very large share of over 75 % of higher size units of more than 500 MW and supercritical units. This group comprises of large numbers of new supercritical units manufactured by indigenous manufacturer like L&T MHI Toshiba, Dossan etc.

5.6.4 The BHEL/ABL make group is a small group with total capacity of around 3000 MW comprising mostly of old units.

5.7 OPERATING AVAILABILITY OF SYSTEMS

The Operating Availability of different systems / areas during the years 2017-16 and 2017-18 are shown in the Table below. It may be seen that equipment availability in 2016-17 has been marginally higher in all areas, and the lower overall Operating Availability in 2017-18 is due to higher unavailability due to "Other" reasons.

Systems / Areas	OPERATING AVAILABILITY	
	2017-18	2017-18
BOILER & AUXILIARIES	95.30	95.66
TURBINE & AUXILIARIES	98.45	98.17
GENERATOR	99.41	98.46
OTHERS	78.00	78.38
Over All	71.16	70.66

5.8 MONTHWISE OPERATING AVAILABILITY

During the year 2017-18, the highest Operating Availability of 77.21% was achieved during April '17 and lowest Operating Availability of 66.81% during July '17. Month wise Planned Maintenance (%), Forced outage (%) and Operating Availability (%) during 2016-17 and 2017-18 are shown below:

Month	Unavailability				Operating Availability (%)	
	Planned (%)		Forced (%)		2017-16	2017-18
	2016-17	2017-18	2017-16	2017-18		
April	4.6	3.18	10.5	19.61	85.75	77.21
May	2.93	3.54	27.78	19.83	69.09	76.63
June	5.58	3.81	22.82	25.87	72.96	70.32
July	5.88	6.57	24.11	26.63	69.61	66.81
August	5.71	6.79	28.97	23.34	64.89	69.87
September	5.39	4.89	25.53	23.39	70.38	71.72
October	4.66	3.60	23.46	25.36	73.63	71.04
November	4.3	4.28	24.38	26.36	72.54	69.36
December	3.75	4.28	25.7	26.56	70.02	69.16
January	3.09	2.83	22.41	25.20	74.15	71.97
February	3.77	3.06	21.91	25.25	74.11	71.69
March	4.46	3.04	30.28	24.12	66.01	72.84
April –March	4.28	4.30	24.52	25.04	71.16	70.66

5.9 OPERATING AVAILABILITY – ORGANISATION WISE

Organization wise Operating Availability in respect of Central Sector, State Sector and Pvt. Utilities during 2017-18 is given below:

Sl. No.	Organization/	No of units	Capacity	PM (%)	FO (%)	OP. Av. (%)
CENTRAL SECTOR						
1	NTPC Ltd.	108	38965	4.45	7.92	87.63

SECTION-6 CAPACITY GROUPWISE PERFORMANCE

- 6.1** This section covers the performance analysis of various capacity groups of thermal units during last three years. As on 31st March 2018, capacity group-wise disposition of 633 units considered in the review is as shown below:

Capacity Group Wise Disposition of thermal units												
Capacity	BHEL/BHEL		BHEL/ABL		RUSSIA/RUSSI A		CHINA/CHINA		OTHER/OTHER		TOTAL	
	NO.	CAP. (MW)	NO.	CAP. (MW)	NO.	CAP. (MW)	NO.	CAP. (MW)	NO.	CAP. (MW)	NO.	CAP. (MW)
25-99	16	1158	0	0	14	720	9	429	35	1762.5	74	4069.5
100-150	48	5632	2	230	3	300	18	2475	11	1480	82	10117

6.2 CAPACITY GROUPWISE PERFORMANCE

Capacity group wise performance of these 633 thermal units is discussed in the subsequent paragraphs.

6.2.1 660-800 MW CAPACITY GROUP (SUPERCRITICAL UNITS)

- 6.2.1.1** In the year 2017-18, 66 super critical units were operational in the grid, out of these, 62 units which had been reckoned for PLF calculation by the end of the year have been considered in the Review. The Plant load factor of the group was **59.21%**. Performance of 660-800 MW capacity group units during the years 2015-16, 2016-17 and 2017-18 are given below: -

Sl. No.	PARTTICULARS	2015-16	2016-17	2017-18
1	UNITS COMMISSIONED BY HE END OF THE YEAR			
	(a) Number	51	60	66
	(b) Capacity (MW)	34,950	41310.0	45550
2	UNITS REVIEWED			
	(a) Number	45	55	62
	(b) Capacity (MW)	30,785	37550.0	42630
	(c) Generation (MU)	164,079.75	189688.54	212028.83
3	Planned Maintenance (%)	2.72	2.97	2.78
4	Forced outage (%)	16.66	19.52	26.77
5	Operating Availability (%)	80.62	77.51	70.45
6	Plant Load Factor (%)	69.36	65.40	59.21

As may be seen, this Capacity Group showed much higher Operating Availability than the overall Operating Availability of the units considered in the review.

During the year 2017-18, energy losses due to forced outage in respect of 660-800 MW capacity group unit was **95308.18** MU. The maximum energy loss of 52538.61MU was due to Misc. (Elect. /Mech.). These accounted for over 1/4th of the total forced outage losses of the group. Details of Forced outages and energy loss of 660-800 MW capacity group units and areas of outages for the years 2016-17 and 2017-18 are shown below:

Area/ cause of Outage of 660-800 MW capacity group	No. of Outages		MU Loss		% of Group Forced outage	
	2016-17	2017-18	2016-17	2017-18	2016-17	2017-18

6.2.4 250-270 MWCAPACITY GROUP

6.2.4.1 The 250-270 MW capacity group units saw a growth in PLF and operating availability. Forced outage losses of this capacity group units decreased from 35.27% in 2016-17 to 30.38% in 2017-18. Detail performance of 250-270 MW capacity group units during the years 2015-16,2016-17 and 2017-18 are given below:

6.2.6 195-200 MW CAPACITY GROUP

6.2.6.1 The forced Outage of 195-200 MW capacity group units decreased to 11.24% in 2017-18 from 12.06% in 2016-17. The PLF of the 195-210 MW Capacity Group also increased to 68.74 % in 2017-18 from 68.52 % in 2016-17. Performance details of 195-200 MW capacity group units during the years 2015-16,2016-17 and 2017-18 are given below: -

PARTICULARS	2015-16	2016-17	2017-18
1.UNITS COMMISSIONED BY THE END OF THE YEAR			
(a) Number	26	26	26
(b) Capacity (MW)	5185	5185	5180
2.UNITS CONSIDERED IN THE REVIEW			
(a) Number	25	26	26

6.2.8 25-99MW (<100MW) CAPACITY GROUP

6.2.8.1 Performance of 25-99 MW capacity group units during the year 2016-17 continued to be much below national average mainly due to uneconomic operation and frequent outages in these units – most of which are vintage units. However, several new units have also got added in this group over last 5 to 7 years. Performance details of these units during 2015-16,2016-17 and 2017-18 are given below: -

PARTTICULARS	2015-16	2016-17	2017-18
1.Units Commissioned By The End Of The Year			
(a) Number	84	85	74
(b) Capacity (MW)	4729.5	4779.5	4069.5
2.Units Considered In The Review			
(a) Number	83	85	74
(b) Capacity (MW)	4704.5	4779.5	4069.5
(c) Generation (MU)	13152.11	13202.78	10398.16
3. Planned Maintenance (%)	5.56	6.52	5.09
4. Forced outage (%)	50.62	54.55	55.74
5. Operating Availability (%)	43.82	38.93	39.17
6. Plant Load Factor (%)	33.63	37.83	35.98

6.2.8.2 Forced outage details due to equipment and auxiliaries and energy loss of 25-99MWcapacity group units for the years 2015-16,2016-17 and 2017-18 are shown below:

Area/ cause of Outage	No.of Outages			MU Loss			% of Group F.O.		
	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18

SECTION-7

PARTIAL UNAVAILABILITY AND NON – UTILIZATION OF ENERGY DUE TO SYSTEM LOAD VARIATION

7.1 Partial unavailability implies that units are operational but are not able to operate at their rated capacity due to the following: -

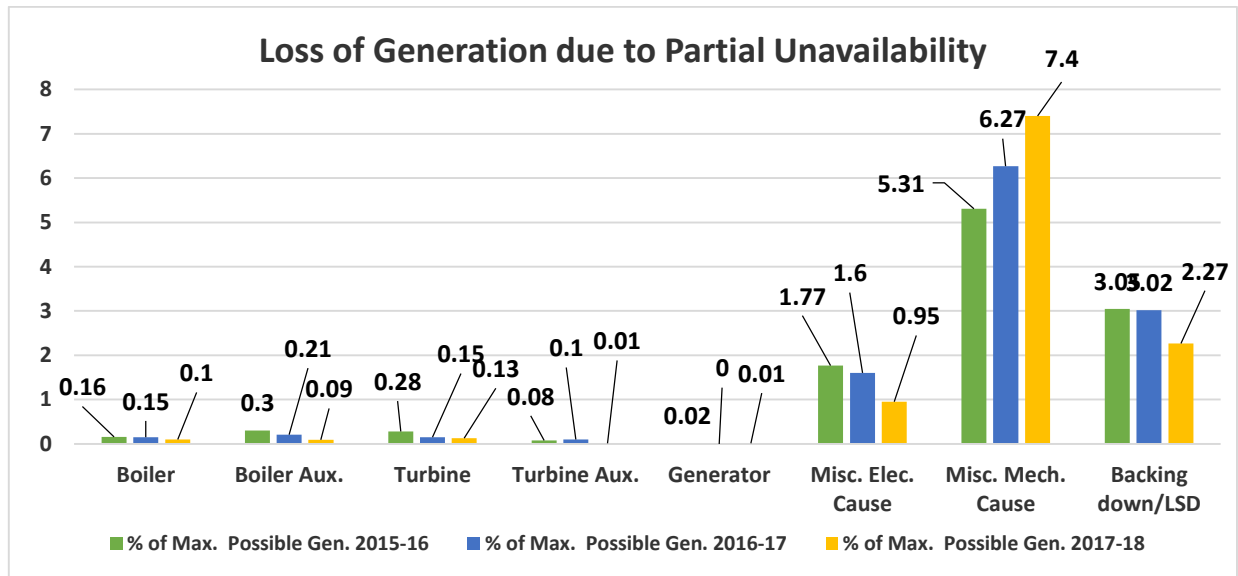

- i) Due to **internal constraints in equipment or auxiliaries** as a result of which the operating units could not deliver the rated output despite no grid constraints.
- ii) Due to **external constraints not attributable to the generating unit/station** such as shortage of fuel or cooling water and low demand (including grid constraints) resulting in reduced generation of the units vis-à-vis their rated capacity.

7.2 OVERALL PARTIAL UNAVAILABILITY

Energy loss due to partial unavailability of the thermal generating units considered in the Review decreased to **10.96%** of the maximum possible generation in 2017-18 from 11.48 % in 2016-17. **The energy loss due to partial unavailability on account of miscellaneous problems such as poor quality coal, coal shortages, backing down continued to be the main cause for Partial Unavailability of units.** The broad details of energy loss due to Partial Unavailability of the thermal generating units due to various factors/equipment on All India basis for the years, 2015-16, 2016-17 and 2017-18 are given below: -

Sl. No	Constraint Area	MU Loss			% Total Partial Loss			% of Max. Possible Gen.		
		2015-16	2016-17	2017-18	2015-16	2016-17	2017-18	2015-16	2016-17	2017-18

-------	------	------	------	------	------	------	------	------	-----	-------	-------	-------

7.5 MAKE-WISE PARTIAL UNAVAILABILITY

Make-wise energy loss due to Partial Unavailability of the thermal generating units in terms of percentage of All India Maximum Possible Generation during 2016-17 and 2017-18 are shown below. **The trend in 2017-18 is largely similar to 2016-17**

Make of Units	PARTIAL UNAVAILABILITY (%)			
	(% of make-wise Maximum Possible Generation)		(% of All India Maximum Possible Gener	
	2016-17	2017-18	2016-17	2017-2018
BHEL/BHEL	10.38	10.55	5.97	6.2
BHEL/ABL	17.23	16.39	0.21	0.16
RUSSIA/RUSSIA	14.93	12.72	0.26	0.2
CHINA/CHINA	14.30	11.75	3.62	2.91
OTHER/OTHER	12.46	13.38	1.42	1.5
ALL MAKES	11.50	10.98	11.48	10.96

7.6 SECTOR WISE PARTIAL UNAVAILABILITY INCLUDING LOW SYSTEM DEMAND:

Sector wise details of energy loss due to Partial Unavailability of the thermal generating units in terms of percentage of All India Maximum Possible Generation during 2016-17 and 2017-18 are shown below. As may be seen, the state sector faced higher Partial Unavailability.

Year	Central Sector	Private Sector	State Sector	All India Average
2016-2017	2.91	3.86	4.71	11.48
2017-2018	3.22	3.68	4.07	10.96

7.7 NON – UTILISATION OF ENERGY DUE TO SYSTEM LOAD VARIATION

During the year 2017-18, some thermal units faced Partial Unavailability due to low schedule from the beneficiaries. Such Loss of energy due to backing down of coal/lignite based units decreased from 43,509.47 MU in 2016-17 to 37503.4 MU in 2017-18. Also, the losses due to reserve shutdown (RSD) of units decreased from **133975.17** MU during 2016-17 to **93149** MU during 2017-18. **Thus the RSD and low system demand together resulted into loss of 7.91 % of maximum possible generation of the units considered.** Details of non-utilization of energy due to system load variations in different regions during 2016-17 and 2017-18 are given at **Annexure 7.3.**

ANNEXURE - 7.1

SECTION-8

PATTERN OF OUTAGES AND OPERATION RELIABILITY

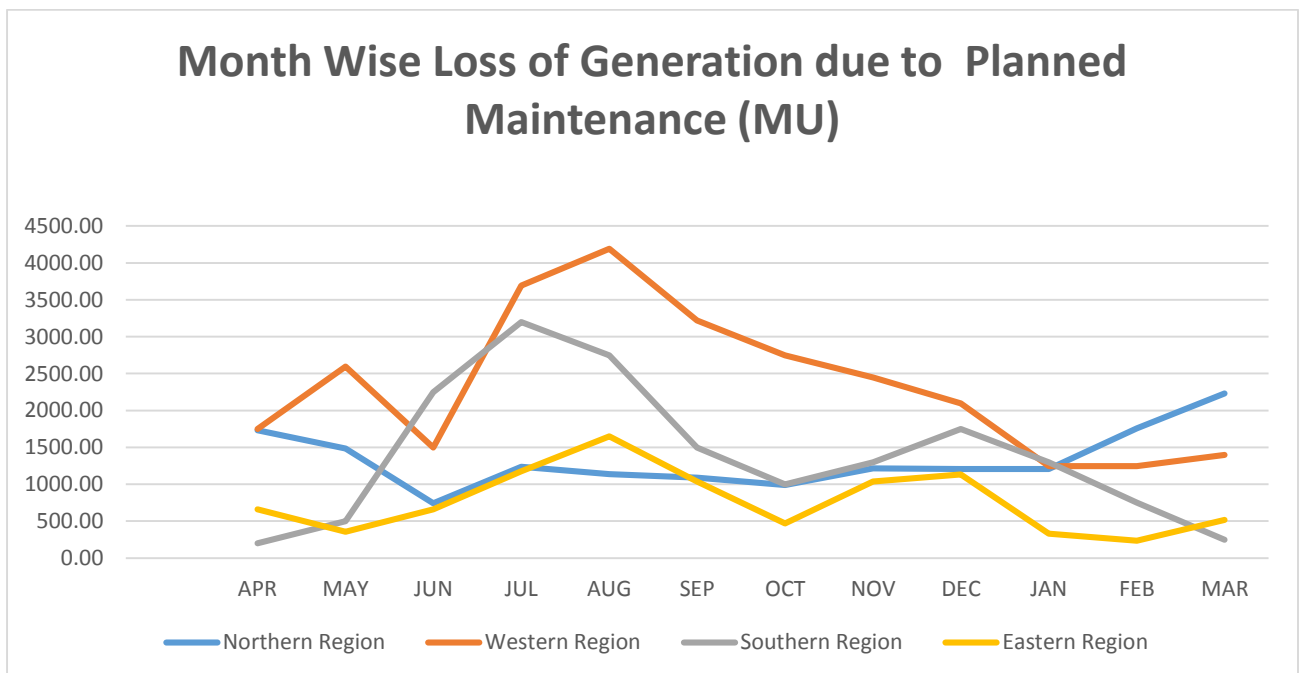

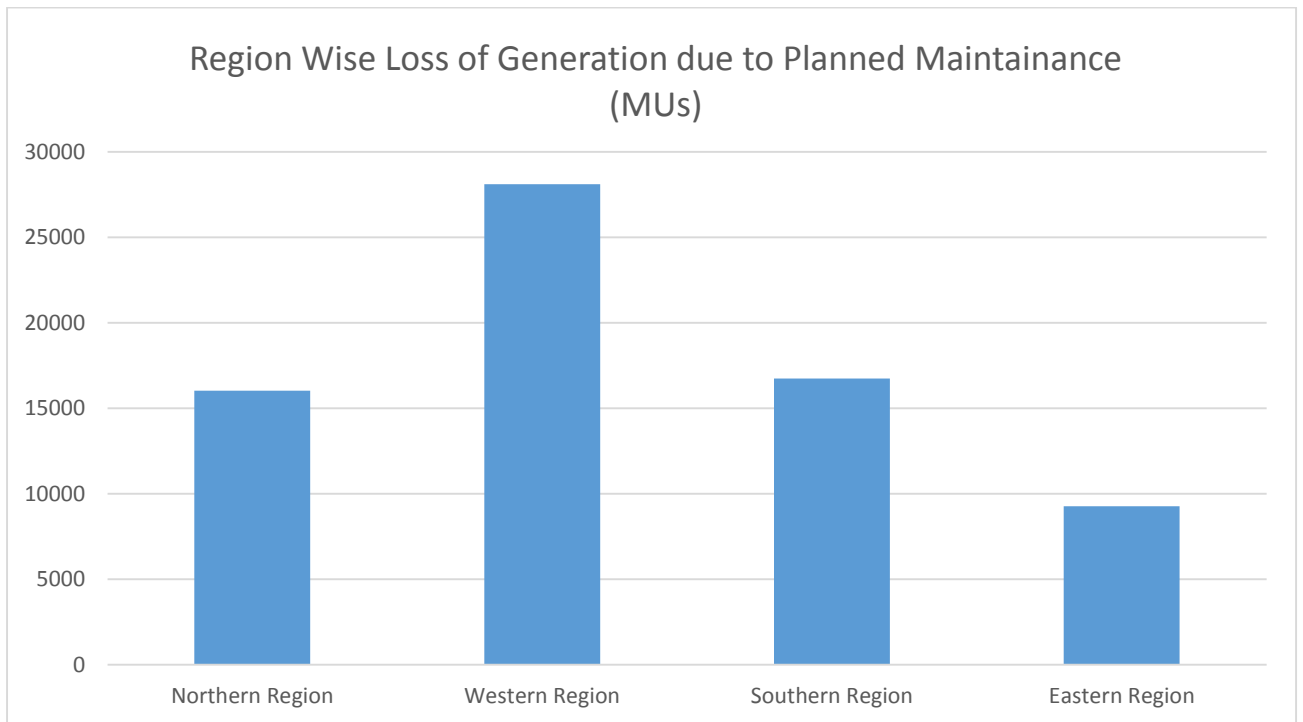

8.1 Outages of thermal units affect their operational reliability. Due to rapid addition of generation capacity over the years, the additional/reserve generation capability available has significantly increased. Thus outages of units do not significantly affect the overall generation availability and reliability in the country. However, the outages trends are indicative of the operational reliability of generating units and have been discussed in this chapter. It should also be kept in view that all unit outages are not attributable to the unit constraints and outages also occur on account of system constraints like coal shortages, transmission constraints, RSD etc. Thus the outage trend discussed in the chapter is indicative of the overall operation reliability of the units including the system constraints.

8.2 EFFECT OF PLANNED MAINTENANCE ON OPERATION RELIABILITY

Each power system of the country formulated generation program for 2017-18 to meet its system requirements. All the power systems program to carry out the Planned Maintenance of their thermal units in a phased manner keeping in view the operational requirements. Region-wise month-wise details of loss of generation due to Planned Maintenance (actual) of thermal units during 2017-18 are shown below:

Region-wise and month-wise generation Loss (in MUs) due to Planned Maintenance						
MONTH	NORTHERN	WESTERN	SOUTHERN	EASTERN	NORTH EASTERN	ALL INDIA
APR	1733.26	1746.83	199.88	659.87	103.75	4443.59

MAR	2228.48	1397.46	249.85	518.47	0	4394.26
Total	16035.14	28123.93	16739.97	9266.52	739.26	70904.8

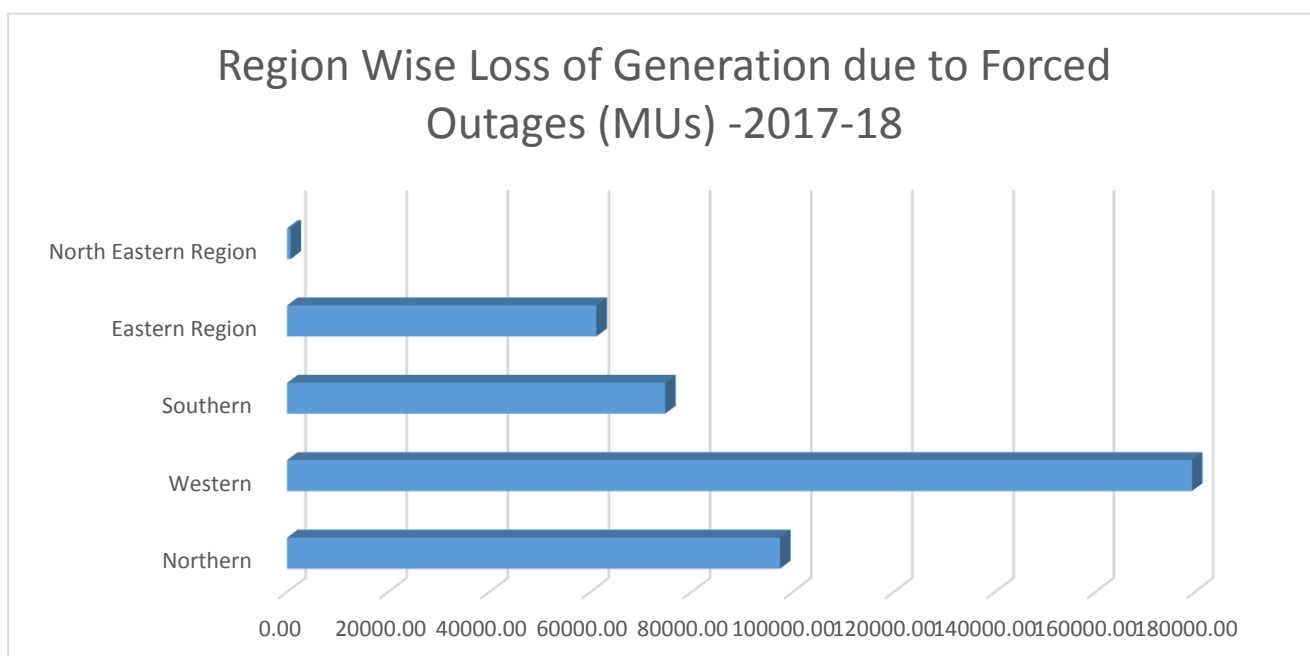

During Aug 2017 the total loss of generation (9812.93 MU) due to planned maintenance of thermal units was highest.

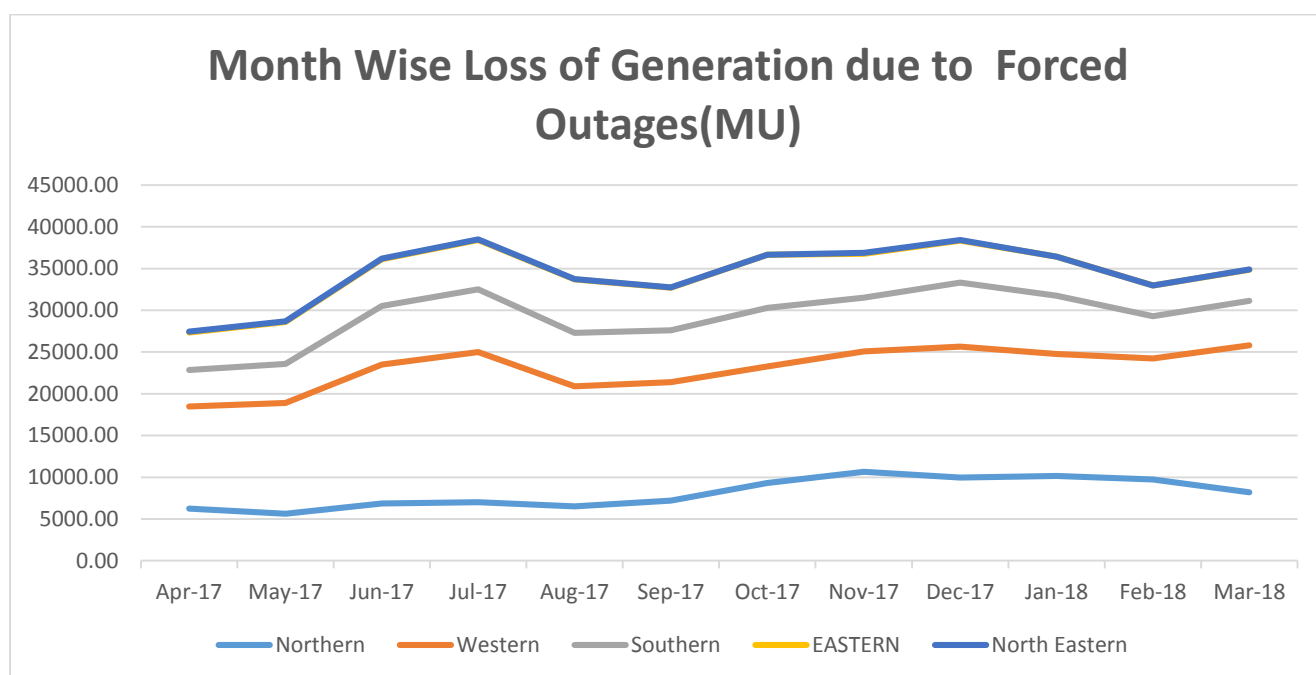

8.3 EFFECT OF FORCED OUTAGE ON GENERATION RELIABILITY

Loss of generation due to various forced outages was maximum during the month of July '17 (38497.94 MU). Loss of generation due to various forced outages was minimum (27439.88 MU) during April '17. Western Region experienced maximum forced outage losses. The Region wise and month wise generation loss due to Forced outages is given below:

Region-wise and month-wise generation Loss (in MUs) due to Forced Outage						
MONTH	NORTHERN	WESTERN	SOUTHERN	EASTERN	NORTH	ALL INDIA

MAR	8201.64	17600.53	5323.24	3730.93	19.63	34875.98
Total	97477.34	179414.85	74765.66	61174.33	693.80	413525.98

8.4 MEAN TIME BETWEEN FAILURE

The degree of reliability of thermal generation is directly proportionate to the Mean Time between Failures (MTBF) of the units. All India / Region wise and Capacity Group-wise details of Mean Time between Failures (MTBF) of thermal units for 2017-18 are given in **Annexure 8.1**.

8.5 CONTINUOUS UNINTERRUPTED OPERATION OF COAL/ LIGNITE BASED UNITS:

Measurement of maximum continuous uninterrupted operation between two consecutive shutdowns and/or failures of a thermal unit also provides the degree of reliability of that unit. It was observed that till the end of 31st March 2018:

- Twenty-four coal/lignite based thermal generating units continuously operated for more than 250 days. YERMARUS TPP UNIT-2 of RPCL & SIMHAPURI TPS UNIT-3 of SEPL continued to operate continuously for more than 350 days.
- Forty-Eight coal/lignite based thermal generating units (NTPC-22, CGPL-2, JSWEL-2, NLC-2, WBPDC-2, and one each of APL, BECL, CESC, DVC, GCEL, GMR ENERGY, JPL, MPL, MPPGCL, NSPCL, RKMPL, RPCL, SEPL, SPL, SVPL, TATA PCL & UPRVUNL) operated continuously for more than 200 days.

SECTION-9 FUEL SUPPLY TO POWER STATIONS DURING 2017-18

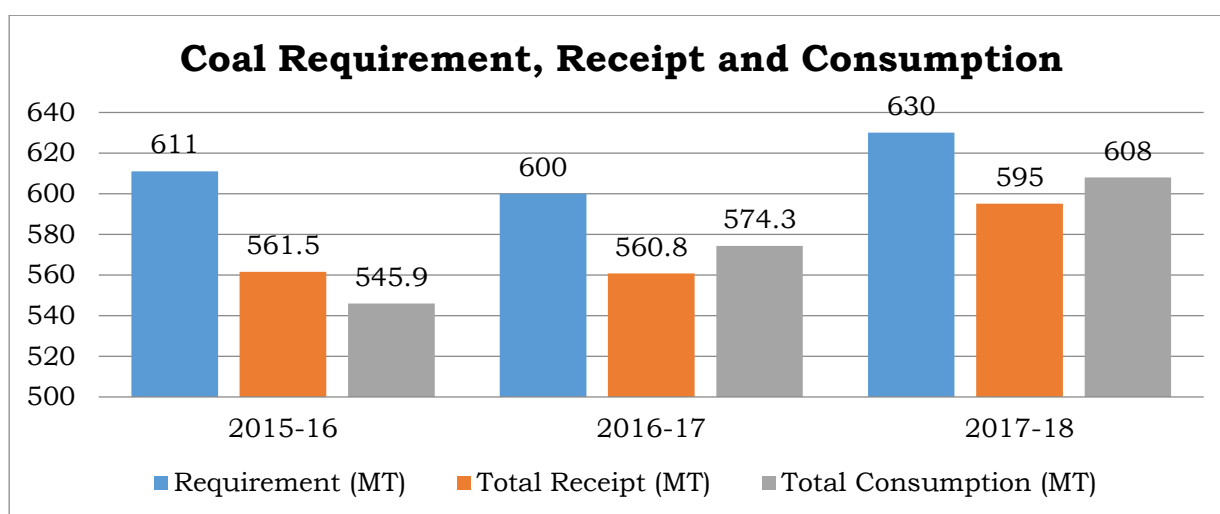

During the year 2017-18, coal supply of **156** number to coal based thermal power plants, having a total capacity of about **184463 MW** was monitored in CEA. The total coal consumption in these stations was around **608 Million Tonnes**. Further, the gas supply of **62** numbers of gas based power plants having capacity of about **23842 MW** was monitored during the year 2017-18. The total gas consumed by these gas based power plants was about **30.72 MMSCMD** (Million Metric Standard Cubic Meter per Day).

9.1 COMPARATIVE COAL SUPPLY POSITION DURING THE YEAR 2015-16, 2016-17 & 2017-18

A Summary of coal receipt and consumption at various coal based power stations monitored by CEA during the last 3 years is as under:

(Figs. in Million Tonnes)

STATUS	YEAR		
	2015-16	2016-17	2017-18
Demand/Requirement	611	600	630
Receipt (Indigenous coal)	480.9	494.7	538.6
Receipt (Imported coal)	80.6	66.1	56.4
Total Receipt (including Imported Coal)	561.5	560.8	595.0
Consumption (Including Imported coal)	545.9	574.3	608

The plant-wise coal consumption during 2017-18 is given at Annexure 9.1.

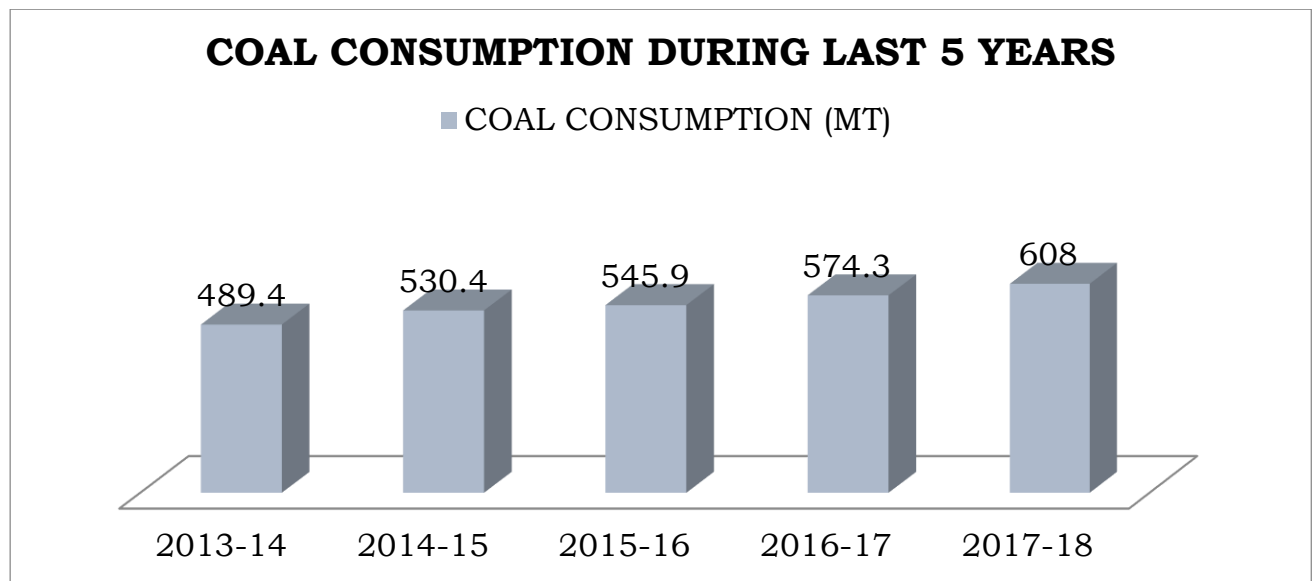

9.2 COAL CONSUMPTION TREND

All India coal consumption in coal based thermal power stations monitored by CEA during 2017-18 was about 608 Million Tonnes against 574.3 Million Tonnes during 2016-17.

Coal consumption from 2013-14 to 2017-18 is as under:

YEAR	CONSUMPTION* (Million Tonnes)
2013-14	489.4
2014-15	530.4
2015-16	545.9
2016-17	574.3
2017-18	608.0

(*Total coal consumption by the stations monitored by CEA.)

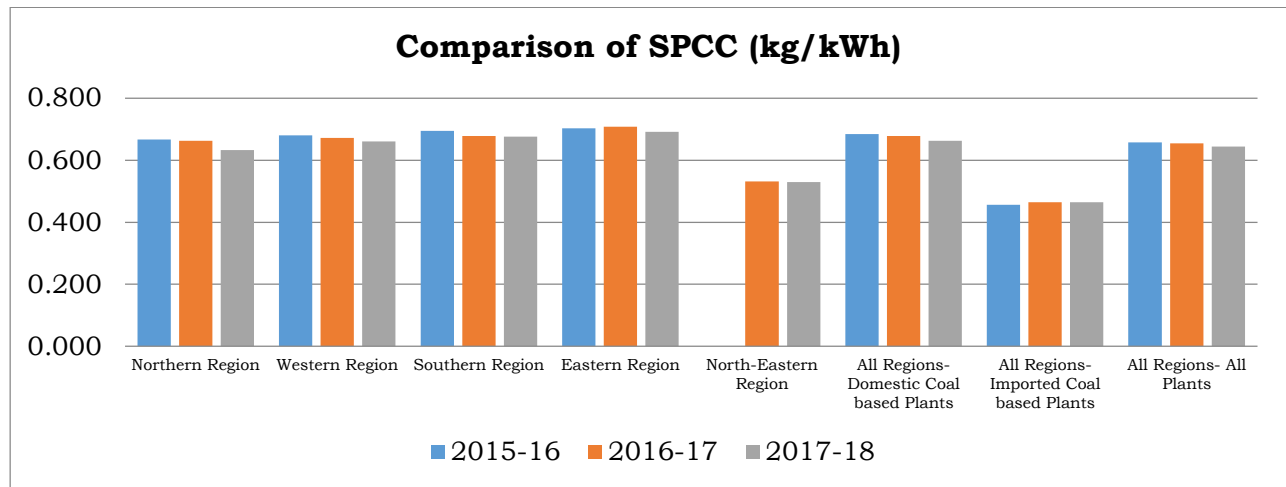

9.3 SPECIFIC COAL CONSUMPTION (kg/kWh)

Specific coal consumption (SPCC) of power plants monitored by CEA during the year 2017-18 was about 0.644 kg/kWh as compared to 0.654 kg/kWh during the year 2016-17. The region-wise details of SPCC for last three years is given as under:

Specific Coal Consumption (kg/kWh)

REGION	2015-16	2016-17	2017-18

Northern Region	0.667	0.663	0.632
Western Region	0.680	0.671	0.660
Southern Region	0.695	0.678	0.676
Eastern Region	0.703	0.708	0.691
North-Eastern Region	-	0.531	0.530
All Regions-Domestic Coal based Plants	0.684	0.678	0.662
All Regions-Imported Coal based Plants	0.456	0.465	0.464
All Regions- All Plants	0.657	0.654	0.644

Station wise details of SPCC for the last three years is given in Annexure-9.2.

9.5 COAL QUALITY ISSUES

In order to address quality concern of the coal supplied to power plants, it has been decided that coal samples shall be collected and prepared by a Single Third Party Agency appointed by power utilities and coal companies. The power utilities and coal companies shall make necessary funding arrangement for third party sampling on equal sharing basis.

9.6 GAS SUPPLY TO GAS BASED POWER STATIONS

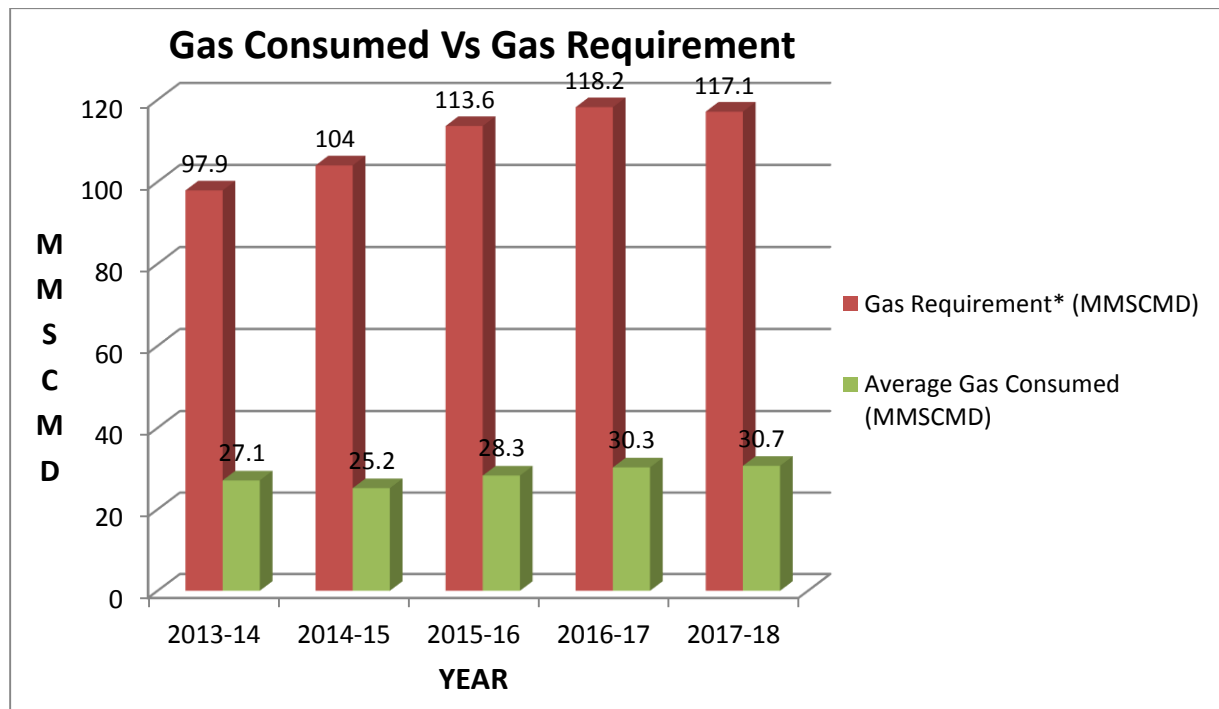

CEA monitored supply of gas to 62 gas based power stations totalling to a capacity of about 23842.2 MW (excluding liquid fuel based power plants). The details of gas consumed by the gas based power plants for the last five years is as under:

Gas Requirement and Supply Position

Years	Capacity (MW)	Gas Requirement* (MMSCMD)	Average Gas Consumed (MMSCMD)
2013-14	20385.3	97.9	27.1
2014-15	21665.6	104.0	25.2
2015-16	23075.6	113.6	28.3
2016-17	24037.2	118.2	30.3
2017-18	23842.2	117.1	30.7

MMSCMD – Million Standard Cubic Metres per Day.

*Gas requirement at 90% PLF.

The plant-wise detail of gas supplied/consumed for the year 2017-18 is at Annexure 9.3.

	GRAND TOTAL=A+B+C	23842.17	49959.06	117.11	94.59	30.72

*Normative gas requirement at 90 % PLF taking GCV of gas=9000k.Cal/SCM (except for Ramgarh CCGT for which GCV is 4150 kCal/SCM), station heat rate - 2900 k.Cal/kWh for open cycle and 2000 k.Cal/kWh for combined cycle

** including E-Bid RLNG gas allotted and supplied during the year 2017-18.

MU -- Million Unit

MMSCMD - Million Standard Cubic Metres/day=MMSCM Data /(NO.OF DAYS IN A MONTH)

Out of total 515 MW capacity of Essar CCPP, 300 MW electricity is being supplied to grid & balance 215 MW is used as captive generation.

SECTION-10 GAS TURBINE PLANTS

10.1 Generation performance of 239 GT (Gas/Naphtha) based units of 65 Gas Turbine Plants (25 MW & above) aggregating to 24842.96 MW was reviewed by CEA during the year 2017-18.

10.2 DETAILS OF GAS TURBINE STATIONS AS ON 31-3-2018

Region-wise and state-wise details of gas turbine stations and units under Central, State and Private Sectors operating as on 31March 2017 are given at Annexure 10.1.

Sector-wise summary of these units are as under:

S. No.	Sector	No. of Stations	No. of units	Installed capacity
1.	Central		60	7237.91
2.	State	24	103	7048.95
3.	Pvt. Utilities+	29	76	10556.1
	Total	65	239	24842.96

Sector-wise details of gas turbine stations indicating unit-wise capacity, make, and date of synchronization / commissioning and primary fuel used are indicated in Annexure 10.2.

10.3 Performance of Gas Turbine Stations during 2017-18

Month-wise generation performance:

The prevailing gas shortage in the country led to reduction in gas-based generation and the PLF of gas based stations remained low. The PLF of gas based plants increased marginally from 22.51% (achieved in 2016-17) to 22.86% in 2017-18

Comparison of month-wise energy generation of gas based plants in the country and their average PLF during the year 2017-18 vis-à-vis 2016-17 and month wise growth rate is given below:

Month	2016-17			2017-18			2017-18 as (%) of 2016-17
	Monitored Capacity	Generatio n (BU)	PLF (%)	Monitor ed	Generati on	PLF (%)

10.4 NEW UNITS SYNCHRONISED DURING 2017-18

No New units were Synchronized during the year 2017-18.

10.5 UNITS RETIRED/ DERATED DURING 2017-18

The details of units retired/derated during the year 2017-18 is given as under:-

S. No.	Name of Station	Unit No	Old Capacity	New
1	LAKWA GT*	GT:4	15	0
2	NAMRUP CCPP*	GT:1	20	0
3	RATNAGIRI CCPP	GT:1	240	205
4	RATNAGIRI CCPP	GT:2	240	205
5	RATNAGIRI CCPP	ST:3	260	230
6	RATNAGIRI CCPP	GT:4	240	213
7	RATNAGIRI CCPP	GT:5	240	213
8	RATNAGIRI CCPP	ST:6	260	237.54
9	RATNAGIRI CCPP	GT:7	240	213
10	RATNAGIRI CCPP	GT:8	240	213
11	RATNAGIRI CCPP	ST:9	260	237.54
12	UTRAN CCPP*	GT:1	33	0

13	UTRAN CCPP*	GT:2	33	0
14	UTRAN CCPP*	GT:3	33	0
15	UTRAN CCPP*	ST:4	45	0

*These units have retired will not be considered in further Reviews.

SECTOR-WISE DETAILS OF GAS TURBINE STATIONS -2017-18

SI. No	Sector/ Organization/ Station	Location	Type of fuel used	Unit Detail	Capacity (MW)	Make	Date of Synchronization
	TOTAL ALL INDIA				24842.96		

SECTION -11

AUXILIARY POWER CONSUMPTION IN THERMAL POWER STATIONS

11.1 Auxiliary power consumption by the thermal stations comprises the power consumption by all the unit auxiliaries as well as the common station auxiliaries' requirement such as CW system, Water treatment, Coal and ash handling, Compressors, station lighting, air conditioning etc. The All India average auxiliary power consumption by the thermal stations during 2017-18 decreased to 7.01% from 7.35% during 2016-17.

11.1.1 The auxiliary power consumption by thermal power stations as percentage of gross generation from 2012-13 onwards is shown below:

11.2 REGION-WISE AUXILIARY POWER CONSUMPTION

The region-wise auxiliary power consumption as percentage of gross generation from 2013-14 onwards is shown below:-

Region	Auxiliary power consumption (%)				
	2013-14	2014-15	2015-16	2016-17	2017-18
NORTHERN	8.35	8.02	8.53	8.05	7.59
WESTERN	7.84	8.03	7.63	7.48	7.45
SOUTHERN	8.12	7.76	7.89	7.85	7.78
EASTERN	8.57	8.3	8.11	7.64	7.63
NORTH EASTERN	0	0	0	9.37	6.56
ALL-INDIA	8.16	8.02	7.95	7.70	7.57

11.3 SECTOR-WISE AUXILIARY POWER CONSUMPTION

11.3.1 The Sector-wise auxiliary power consumption as percentage of gross generation from 2013-14 onwards is shown below: -

Sector	2013-14	2014-15	2015-16	2016-17	2017-18
CENTRAL	7.4	7.02	7.16	6.99	7.01
STATE	9.23	8.95	9.28	9.03	8.41
PVT UTILITY	8.09	8.05	8.05	8.04	8.25
PRIVATE IPPS	7.82	8.15	7.51	7.22	7.41
ALL INDIA	8.16	8.02	7.95	7.70	7.57

11.4 STATIONWISE AUXILIARY POWER CONSUMPTION

11.4.1 The auxiliary power consumption of a Station depends on various factors like type of equipment provided, fuel quality, site specific conditions and operating practices/operating efficiency. The choice of milling systems, fans and Boiler Feed Pump significantly affects the auxiliary power consumption. Fuel quality affects auxiliary power consumption in fuel handling, ash disposal system and also in main plant equipment. Some Stations have site specific requirements like Cooling water taken from very long distances affecting the auxiliary power consumption. Plant operation at low load factors also considerably affects the Auxiliary power consumption.

11.4.2 While it is not possible to account for all of the above factors for comparing auxiliary power consumption of the Stations, a categorization of Stations has been made based on two major factors affecting auxiliary power consumption so as to have meaningful comparisons amongst Stations. These are

- Boiler Type – Circulating Fluidized Bed Combustion vs. Conventional Pulverized coal fired boilers.
- Type of Boiler Feed Pump – Motor driven Vs Turbine driven BFP

11.4.3 The CFBC boilers have significantly higher Auxiliary power consumption due to their higher fan power. Similarly, units with TBFP have significantly lower auxiliary power consumption. Thus Stations with significant capacity (more than 50 %) in TBFP units have been considered as a separate category. The details of overall auxiliary power consumption in these categories of Stations are as under: -

Type of Station	Auxiliary Power Consumption (%)				
	2013-14	2014-15	2015-16	2016-17	2017-18
Stations with Circulating Fluidized Bed Combustion Boilers	13.64	12.50	12.31	12.28	14.20
Stations with PC Boilers and >50 % capacity with TBFPs	6.88	6.78	6.62	6.58	6.51
Stations with PC Boilers and >50 % capacity with MBFPs	9.26	9.12	9.60	9.29	8.97
Overall	8.16	8.02	7.95	7.70	7.01

Details of Station wise auxiliary power consumption in each of the above categories from 2012-13 onwards are given at the Annex. 11.1.

SECTION-12

STATION OPERATION UNDER DISTURBED GRID CONDITIONS

12.1 Indian Electricity Grid Code (IEGC) specifies operating band for frequency of grid as 49.90 Hz to 50.05 Hz. The percentage of time during which the power systems of the country operated below 49.9 Hz, between 49.9 to 50.05 Hz (IEGC Band) and above 50.05 Hz and the maximum and minimum frequencies of the grid during April, 2017 to March, 2018 is given in the following table:

% of Time when Frequency was			Max. Frequency (Hz)	Min. Frequency (Hz)
Below 49.9 Hz	Between 49.9-50.05 Hz	Above 50.05 Hz		
10.55	76.24	13.21	50.32	49.62

The monthly All India Frequency Profile during the years 2017-18 and 2016-17 are shown in **Annexure-12.1** and **Annexure-12.2** respectively.

ANNEXURE-12.1**ALL INDIA FREQUENCY PROFILE (MONTH-WISE) DURING 2017-18**

Month	% of Time when Frequency was			Maximum Frequency	Minimum Frequency	Average Frequency
	Below	Between	Above			
April,2017	9.07	74.47	16.46	50.26	49.66	49.99
May,2017	9.00	71.10	19.90	50.32	49.64	49.99
June,2017	5.97	75.43	18.60	50.24	49.72	50.00
July,2017	6.52	76.32	17.17	50.23	49.69	49.99
August,2017	7.12	76.99	15.88	50.20	49.65	49.99
September,2017	11.77	78.50	9.73	50.32	49.62	49.97
October,2017	13.60	77.21	9.19	50.20	49.65	49.97
November,2017	16.91	73.53	9.56	50.27	49.62	49.97
